ABSTRACT

This is the thirty-third in a series of reports on research doctorates awarded by colleges and universities in the United States. The data presented in this report are from the annual Survey of Earned Doctorates, a census of research doctoral recipients who earned their degrees between July 1, 1998, and June 30, 1999. This survey, conducted since 1958, is sponsored by six federal agencies: the National Science Foundation, the National Institutes of Health, the U.S. Department of Education, the National Endowment for the Humanities, the U.S. Department of Agriculture, and the National Aeronautics and Space Administration. All survey responses become part of the Doctorate Records File, a virtually complete database on research doctorate recipients from 1920 to 1999. The overall response rate for the 1999 survey was 91.7 percent. The report begins by reviewing overall trends in research doctorates awarded by U.S. universities and continues by discussing trends in the seven broad fields in which research doctorate recipients earn their degrees. Trends in doctorate awards by sex, race/ethnicity, citizenship, parental education, and time to degree are described next, and the report concludes with discussion of the sources of financial support during graduate school and the postgraduation status and plans of doctorate recipients. A special section is devoted to the interstate migration of U.S. doctorate recipients from birth to initial postgraduation location. The report includes numerous figures and tables. Appendices include additional statistics, technical notes, and the survey instrument. (EV)

Survey of Earned Doctorates

SPONSORED BY THE NATIONAL SCIENCE FOUNDATION, THE NATIONAL INSTITUTES OF HEALTH, THE U.S. DEPARTMENT OF EDUCATION, THE NATIONAL ENDOWMENT FOR THE HUMANITIES, THE U.S. DEPARTMENT OF AGRICULTURE, AND THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

HIGHLIGHTS

This report presents data on recipients of research doctorates awarded by U.S. universities from July 1, 1998, through June 30, 1999. This information is taken from the 1999 Survey of Earned Doctorates (SED), an annual census of new doctorate recipients.

The 392 universities in the United States that conferred research doctorates awarded 41,140 doctorates during the 1998-1999 academic year (the eligibility period for the 1999 SED). This compares to 42,683 doctorates awarded in 1998 (a decline of 3.6 percent in one year), and marks the first annual decline in fourteen years.

The number of doctorates awarded by broad field in 1999 was greatest in life sciences, which conferred 8,126 Ph.D.s. The numbers for 1999 conferred in the other broad areas were 7,036 in social sciences; 6,324 in the physical sciences and mathematics (combined); 6,557 in education; 5,468 in the humanities; 5,337 in engineering; and 2,292 in business and other professional fields. The declines from 1998 were 5 percent in life sciences, 6 percent in physical sciences and mathematics, and 10 percent in engineering. The numbers of doctorate recipients in the other broad fields were virtually the same in the 1997-98 and 1998-99 academic years.

Women received 17,493 doctorates, or 42.5 percent of all doctorates granted in 1999. This is the highest percentage ever for women, continuing a 30-year upward trend. Women earned 44.7 percent of the doctorates granted in life sciences, 54.5 percent in social sciences, 48.9 percent in humanities, 64.2 percent in education, and 41.0 percent in business/other professional fields. In the physical sciences and engineering, they constituted 23.4 percent and 14.9 percent, respectively.

Nearly 16 percent of all doctorates awarded to U.S. citizens in 1999 were earned by U.S. racial/ethnic minority groups. This is the largest percentage ever, and continues a steady upward trend. Among the 27,177 doctorates earned in 1999 by U.S. citizens who identified their race/ethnicity (98.4 percent of all U.S. citizen doctorates), 1,596 doctorates were earned by blacks, 1,109 were earned by Hispanics, 1,324 were earned by Asians, and 219 were earned by American Indians. The broad fields with the largest percentages of minorities were education, in which blacks were the predominant minority group, and engineering, in which Asians were predominant.

U.S. citizens received 70.8 percent of all doctorates earned in 1999 by individuals who identified their citizenship status (94.8 percent of all doctorate recipients identified their citizenship). The People's Republic of China was the country of origin for the largest number of non-U.S. doctorates in 1999, with 2,400, followed by India with 1,077, Korea with 1,017, Taiwan with 981, and Canada with 473. The percentage of doctorates earned by U.S. citizens ranged from lows of 48.8 percent in engineering and 57.2 percent in the physical sciences, to highs of 88.6 percent in education and 81.8 percent in the humanities.

Median time to degree since receipt of the baccalaureate was 10.4 years in 1999, virtually unchanged from 1998 and 1997 (10.4 and 10.5 years, respectively). Median time to degree since first enrollment in any graduate program was 7.3 years in 1999, also unchanged from 1998 and 1997 (7.3 years in both).

Most of the 1999 doctorate recipients (60.9 percent) received the majority of their financial support for graduate education from such program- or institution-based sources as university fellowships or teaching and research assistantships. Half (49.9 percent) of the 1999 doctorate recipients reported no educational indebtedness at completion of the Ph.D.; 13.3 percent reported cumulative education debt levels of \$30,000 or more.

About 70 percent of the new Ph.D.s had definite postgraduation commitments for employment or continued study when they completed the SED survey. Of those, 69.8 percent will work and 30.2 percent will continue their studies as postdoctorates. For U.S. citizens, 51.7 percent of those with firm employment commitments noted higher education as their intended work sector. About one-fifth (21.9 percent) indicated industry or self-employment; 8.7 percent said some level of government; the remaining 17.6 percent indicated "other."

NOTICE

This report is based on data collected in the Survey of Earned Doctorates (SED) conducted for the National Science Foundation (NSF), the National Institutes of Health (NIH), the U.S. Department of Education (USED), the National Endowment for the Humanities (NEH), the U.S. Department of Agriculture (USDA), and the National Aeronautics and Space Administration (NASA), by the National Opinion Research Center (NORC) under NSF Contract No. SRS-9712655. Findings in this publication represent analyses developed by NORC, which have been reviewed, but not necessarily verified, by the participating Federal agencies and do not necessarily reflect the views of the sponsoring agencies.

NSF publications from the Survey of Earned Doctorates and the Doctorate Records File are available free on request (see inside back cover). Standardized tables on baccalaureate origins of Ph.D.s by major field of doctorate and trend tables on citizenship, race/ethnicity, and sex of Ph.D.s by fine field of doctorate are available for a fee. Customized tables can also be prepared at cost. For more information, please contact:

(The report gives the results of data collected in the Survey of Earned Doctorates, conducted for six Federal agencies, NSF, NIH, USED, NEH, USDA, and NASA by NORC.)

This report is available on the NORC web-site: <http://www.norc.uchicago.edu/studies/sed/sed1999.htm>. Reports on science and engineering doctorates can be found on the National Science Foundation's web-site: <http://www.nsf.gov/sbe/srs/sengdr/start.htm>.

ACKNOWLEDGMENTS

Academic officers at the nation's doctorate-granting universities distribute, collect, and forward SED questionnaires to NORC. The project gratefully acknowledges the support and assistance of graduate deans and their staff, registrars, dissertation secretaries, and other administrators who participate in the SED effort and contribute to its success. The sponsoring Federal agencies and NORC also extend their heartfelt thanks to the more than 40,000 new research doctorate recipients who took the time to complete and return their copy of the survey.

The conduct of the SED, the maintenance of the resulting data file, and the publication of this report are funded jointly by the National Science Foundation (NSF), the National Institutes of Health (NIH), the U.S. Department of Education (USED), the National Endowment for the Humanities (NEH), the U.S. Department of Agriculture (USDA), and the National Aeronautics and Space Administration (NASA). Susan Hill (NSF) serves as the project officer for the six participating agencies. The survey's relevance to national policy issues has increased, thanks to the involvement and constructive reviews of the design and analysis of the survey by representatives from the six agencies: Paul Seder (NIH), Nancy Borkow (USED), Frank Shaw (NEH), K. Jane Coulter (USDA), Malcom Phelps (NASA), and Mary Golladay (NSF). Susan Hill (NSF), Director of the Doctorate Data project, provided guidance and direction during the preparation of this report. Comments from reviewers Peter Syverson of the Council of Graduate Schools and George E. Walker of Indiana University were invaluable and greatly appreciated.

The authors gratefully acknowledge the contributions of their NORC colleagues who provided valuable counsel, direction, and assistance with various survey responsibilities: Pearl Zinner, Special Assistant to the President of NORC; Lance Selfa, Research Analyst; Syed Ahsan and Sharnia Bullock, Coordinators for the Data Preparation Center; Rebecca Hanson, Data Quality Analyst; Lori Harmon, Survey Specialist; Parvati Krishnamurty, Survey Economist; Whitney Moore, Survey Methodologist; Scott Sederstrom and William B. Witherspoon, Research Assistants; Jamie Friedman, Director of Institutional Contacting; Isabel Guzman-Barron and Donna Jameison, Administrative Assistants; Crystal Williams, Data Preparation Supervisor, and the Production Center Staff; Lisa Lee, Survey Methodologist; and members of the Communications Department, Imelda Perez, Marcus Shumpert, and Ellen Hathaway.

***** IMPORTANT NOTICE *****

The estimates reported for the Survey of Earned Doctorates (SED) are simple tabulations of all available information, with no adjustment for nonresponse. Therefore, differences in response rates from year to year can produce numerical fluctuations that may not be related to real trends.

Although response to the SED has been as high as 95 to 98 percent over time, it declined to 92 percent during the 1980s. In an effort to improve the response rate, the survey methodology was modified in the years after 1989. Response rose, stabilizing around 95 percent from 1991 to 1995. However, the response rates were 92.8 percent for 1996 and 91.5 percent for both 1997 and 1998. This year, the response rate rose slightly to 91.7 percent. (*Note:* These percentages represent *self-report rates*, that is, the proportion of questionnaires completed by research doctorate recipients. While survey forms containing partial information filled in by either the doctoral institution or the survey contractor are not included in these rates, tables in this report incorporate the available data from these sources.) The self-report rate for 1999 may increase slightly in the next year if additional questionnaires are received from research doctorate recipients. See appendix C for a table giving survey response rates from 1967 to 1999.

Item response rates have shown a pattern of improvement since 1990—a natural consequence of the increase in the overall self-report rate, as well as a result of format revisions to the questionnaire and follow-ups for missing information. In 1990, new follow-up procedures were implemented to increase coverage of several variables: birth year, sex, race/ethnicity, citizenship status, country of citizenship, baccalaureate year and institution, and postgraduation plans. Response rates for these variables have since improved—especially for citizenship and race/ethnicity, resulting in an increase in the reported numbers of minority Ph.D.s. Whether or not individuals completed the survey questionnaire, the following four data items are available for most all recipients: sex, Ph.D. institution, field, and year.

The data for a given year are updated the following year with any responses received *after* survey closure. Postsurvey adjustment was most significant for 1990 and 1991 Ph.D.s, with the largest impact on the number of blacks. For both of these years, the total number of black Ph.D.s increased by about 7.5 percent in the year after survey closure. The survey cycle was then extended to allow receipt of more follow-up information before closure, resulting in much smaller postsurvey adjustments for the 1992 through 1995 data (a 1.4 percent increase in black Ph.D.s for 1992, a 0.2 percent increase for 1993, a 0.5 percent increase for 1994, and a 1.5 percent increase for 1995).

Adjustments to data are presented in reports subsequent to the initial report for a survey. For example, updates for 1994 appeared in *Summary Report 1995*. Updates to 1999 data will be presented in next year's report.

DOCTORATE RECIPIENTS FROM UNITED STATES UNIVERSITIES: SUMMARY REPORT 1999

Introduction

Doctorate Recipients from United States Universities: Summary Report 1999 is the thirty-third in a series of reports on research doctorates awarded by colleges and universities in the United States.¹ The data presented in this report are from the annual Survey of Earned Doctorates (SED), a census of research doctoral recipients who earned their degrees between July 1, 1998, and June 30, 1999. This survey, conducted since 1958, is sponsored by six Federal agencies: the National Science Foundation, the National Institutes of Health, the U.S. Department of Education, the National Endowment for the Humanities, the U.S. Department of Agriculture, and the National Aeronautics and Space Administration. All survey responses become part of the Doctorate Records File (DRF), a virtually complete database on research doctorate recipients from 1920 to 1999. The overall response rate for the 1999 survey was 91.7 percent.²

Organization

Summary Report 1999 begins by reviewing overall trends in research doctorates awarded by U.S. universities and continues by discussing trends in the seven broad fields in which research doctorate recipients earn their degrees. Trends in doctorate awards by sex, race/ethnicity, citizenship, parental education, and time to degree are described next, and the report concludes with discussion of the sources of financial support during graduate school, and the postgraduation status and plans of doctorate recipients.

A special section, which follows the discussions of trends, financial support and indebtedness, and postgraduate plans of recipients in the main report, is devoted to the interstate migration of U.S. doctorate recipients from birth to initial postgraduation location. This section

¹ The Survey of Earned Doctorates collects information on *research* doctorates only. This survey differs from the U.S. Department of Education's collection of the number of doctorate degrees awarded per institution for all fields. For an evaluation of the differences, see National Science Foundation, 1993, *Science and Engineering Doctorates 1960-1991*, NSF 93-301, Detailed Statistical Tables, pp. 2-6, Washington, DC.

² See appendix C for information on response rates for the SED.

presents analyses of geographic mobility with regard to sex, marital status, race/ethnicity, family background, field of study, and postgraduate employment.

Figures displaying selected trend data accompany the brief narratives of key survey findings. The numbers and percentages from which the figures are drawn are contained in a set of tables following the main text. A reference at the bottom of each figure indicates the corresponding table number. Basic tables of statistics for 1999 research doctorate recipients are shown in appendix A, and trend tabulations for the previous ten-year period (1989 to 1999) are presented in appendix B. Appendix C provides technical notes, including response rates, and other information related to tables and figures in the report. Appendix D is the SED questionnaire for the 1999 academic year. Appendix E lists field of study classifications and research degree titles employed in the SED.

Trends In Doctorate Recipients

Overall Trends and Rates of Change

After thirteen consecutive years of annual increases in the number of research doctorates received, a 3.6 percent decrease from the previous year occurred in the 1999 academic year. For the twelve-month period ending June 30, 1999, U.S. universities awarded 41,140 research doctorate degrees,³ compared with 42,683 for the previous year (see table 1). Only between 1976 and 1977 has there been an annual percentage drop – 3.7 percent – larger than this one. For the last 40 years, the increase in the number of doctorates awarded by U.S. universities has averaged 3.8 percent per year.

Between 1961 - when the number of annual doctorates awarded exceeded 10,000 for the first time - and 1967, the annual growth rate was almost 12 percent, and the number of doctorates awarded virtually doubled (20,403). Four years later, in 1971, the annual total topped 30,000 (31,867) for the first time. The decades of the 1970s and 1980s saw periods of more modest increases, and in 7 of those 20 years annual totals even declined. The total figure did not exceed 40,000 until 1994 (41,034), 23 years after it had reached the 30,000 plateau; not until 1989 did the annual total – 34,327 – exceed the previous high-water mark of 33,755 set in 1973. Over the past few years, the annual rates of increase have become smaller than they were in the first half of the decade of the 1990s, including gains of only 0.3 percent per year for both 1997 and 1998; thus the 1999 total number of doctorates is approximately the same as it was five years ago (41,140 versus 41,034). (See figures 1 and 2.)

Overall in 1999, 57 percent of the doctorate recipients were male, about two-thirds were U.S. citizens, approximately 64 percent were white, and about 6 in 10 recipients were currently married or living in a marriage-like relationship. The typical recipient was slightly under 34 years of age at the time the degree was awarded. (Detailed statistics are provided in the tables and discussed later in this report.)

³ Doctorates are reported by academic year (from July 1 of one year through June 30 of the following year) and include *research* and *applied research doctorates* in all fields. Doctoral degrees such as the Ph.D., D.Sc., and Ed.D. are covered by this survey; professional degrees (e.g., M.D., D.D.S., J.D., Psy.D.) are not. A full list of included degrees can be found in appendix E. For convenience throughout this report, the terms “Ph.D.” or “doctorate” are used to represent any of the research doctoral degrees covered by the survey. Please note that if an individual earned a second research doctorate, the second doctorate is not included in the SED.

See Table 1.

SOURCE: NSF/NIH/USED/NEH/USDA/NASA, Survey of Earned Doctorates

Doctorate-granting Institutions, Doctorate Recipients per Institution, and Geographical Distribution

During the 1999 academic year, 392 universities in the United States and Puerto Rico awarded at least one research doctorate. This number has remained relatively level for the past few years, following a steady increase from the early 1960s (174 in 1961) until 1996 (392).

The mean number of doctorates awarded per institution in 1999 was 105; the median was 43. (See table 2 for the mean number of doctorates awarded per institution from 1961 to 1999.) As the substantial difference between the mean and the median suggests, a relatively small number of institutions grant a disproportionately large number of doctorates. Just 47 institutions granted 50 percent of all doctoral degrees in 1999. Eighteen institutions accounted for 25 percent of all doctorate degrees granted; the second quartile contained 29 institutions, the third quartile included 55 universities; and the remaining 290 institutions together accounted for the final 25 percent of doctorates.⁴

The University of Texas-Austin granted the largest number of doctorates, 752, or 1.8 percent of all doctorates awarded, followed by the University of California-Berkeley (717) and the University of Wisconsin-Madison (685). These three institutions granted the most doctorates in 1998 and 1997 as well, although Berkeley and Wisconsin changed positions within the top three. For 1999, 10 institutions granted 15.6 percent of all doctorates; the corresponding figure for 1998 was 16.2 percent.

With respect to broad field, the University of California-Berkeley awarded the most doctorates (172) in the physical sciences. The Massachusetts Institute of Technology (MIT) granted the most engineering doctorates (194), while the University of Wisconsin-Madison led all universities in the life sciences (178) and the University of Texas-Austin topped the list for social science doctorates (113). Harvard granted the largest number of doctorates in the humanities (146); Nova Southeastern University had the highest total in education (428), and Texas-Austin granted the most doctorates in the heterogeneous "professional/other" category (51). See table 3 for the top 20 ranked institutions for each of the seven broad fields.

The numbers of doctorates awarded by broad field are also concentrated in a relatively small number of institutions. While the top 10 degree-granting universities awarded 15.6 percent of all doctorates in 1999, the concentration was higher in six of the seven broad fields: 19.5

⁴ Calculations derived from appendix table A-7.

percent in the physical sciences, 28.1 percent in engineering, 18.7 percent in the life sciences, 22.9 percent in the humanities, 21.7 percent in education, and 17.0 percent in the professional/other category. Only in the social sciences was the concentration lower than the overall average (14.8 percent). See table 3.

As shown in figure 3 and table 4, California universities led the nation by awarding 4,724 doctorates, or 11.5 percent of all doctorates in 1999. New York institutions granted the next highest number of doctorates (3,511), followed by institutions in Texas (2,697), Illinois (2,201), Massachusetts (2,132), Pennsylvania (2,115), Florida (1,944), and Ohio (1,638). These eight states accounted for more than half – 51.0 percent – of all doctorates awarded in 1999.

See Table 4.

SOURCE: NSF/NIH/USED/NEH/USDA/NASA, Survey of Earned Doctorates

Doctorates by Broad Field

The Survey of Earned Doctorates (SED) classifies research doctorate degrees into approximately 290 fields of specialization (these are listed on pages 8 and 9 of the questionnaire included in appendix D). For presentation purposes here, these are grouped into seven broad fields: physical sciences,⁵ engineering, life sciences,⁶ social sciences (including psychology), humanities, education, and a heterogeneous group of professional and other fields (including business, communications, social work and theological programs). Information about the levels and trends in these broad fields is of particular interest to Federal sponsors of doctoral research, academic administrators, and professional associations, among others. These groups rely on these data to make informed decisions that influence graduate education and the nation's labor force.

The overall decrease of 3.6 percent in doctorates awarded between the 1998 and 1999 academic years occurred across the board: all seven broad field categories experienced declines in the absolute number of degrees, with engineering and the physical sciences registering the largest percentage drops, 9.8 percent and 6.2 percent, respectively. The social sciences, humanities, and education showed the smallest decreases. The life sciences, with 8,126 doctorates, remained the largest single broad field, as it has since 1988.

Compared with five years ago (1994), when the total number of doctorates awarded was approximately the same as it was in 1999, engineering and the physical sciences showed large decreases: 8.3 percent and 7.3 percent lower in 1999 than in 1994, respectively.⁷ Humanities registered the largest percentage increase from 1994 to 1999, with 15.3 percent more degrees awarded in 1999 than five years earlier. The life sciences (+5.0 percent) and social sciences (+6.4 percent) were also higher in 1999; education was 2.2 percent lower. (See table 5.)

The four broad fields that together constitute "science and engineering" (S&E)—physical, life, and social sciences plus engineering—represented 65.2 percent of all doctorates awarded in 1999. Ten years ago (1989) they accounted for approximately the same percentage of all doctorates (65.0 percent), but compared with 25 years ago (1974), the S&E fields represent

⁵ The physical sciences include mathematics and computer sciences, as well as the traditional physical science disciplines.

⁶ The life sciences encompass biological, agricultural, and medical sciences.

⁷ The smaller, heterogeneous "professional/other" category registered the largest percentage decrease between 1994 and 1999, 11.4 percent.

a larger percentage of total degrees in 1999 than in 1974 (57.4 percent). (See table 5.) However, these combined S&E fields showed a 5.1 percent decrease between 1998 and 1999 and a 0.6 percent smaller total in 1999 than in 1994.

Of the 26 subfields included in table 5, 19 experienced declines in number of doctorates awarded between 1998 and 1999. Within the S&E category, only two subfields -- both in the social sciences -- had gains; the other 13 S&E subfields showed declines between these two academic years. Comparing 1994 with 1999, 12 of the 26 subfields had larger absolute numbers of doctorates in 1999, and 14 had smaller numbers; within S&E fields in these same two years, 6 subfields had larger totals in 1999 than in 1994, and 9 had smaller ones. For both the one-year and five-year comparisons within S&E, the physics and astronomy subfields displayed the largest declines and anthropology the biggest gains.

Comparing a slightly different set of subfields -- see table 6 -- over a 10-year interval between 1989 and 1999, the three disciplines with the largest percentage increases were neuroscience (141.4 percent), cell biology (114.3 percent), and history (87.9 percent). Only one subfield -- agricultural sciences -- showed a decline over this period (-10.9 percent).

See Table 5.

SOURCE: NSF/NIH/USED/NEH/USDA/NASA, Survey of Earned Doctorates

Doctorates by Sex

The aggregate decrease in doctorates between 1998 and 1999 – 3.6 percent – varied by sex. For males there was a 4.8 percent decline; for females, only a 2.0 percent drop. The numbers of doctorates awarded both to men and to women fell in 1999: 1,193 fewer men and 363 fewer women received doctorates in 1999 than in 1998. The net effect is that for 1999, females received 42.7 percent of all doctorates, up from 42.0 percent in 1998, which had been the highest percentage ever for women.⁸ This marks the fourth consecutive year in which the representation of female doctorate recipients has exceeded 40 percent. Five years ago (1994), females constituted 38.7 percent of all doctorate recipients; 10 years ago (1989) that percentage was 36.5 and 25 years ago (1974), it was less than 20 percent (19.5 percent). (See table 7.)

Figure 7: Doctorate recipients by sex, 1989-1999

See Table 6.

SOURCE: NSF/NIH/USED/NEH/USDA/NASA, Survey of Earned Doctorates

⁸ For 1999 sex could not be determined for 187 doctorate recipients; these 187 are not part of these and other percentage calculations. In 1998 the corresponding number of cases of undetermined sex was 174.

With respect to the distribution by sex of doctorates across broad fields of study, for 1999 women constituted 64.2 percent of all education doctorates, the majority in the social sciences (54.5 percent), and almost half in the humanities (48.9 percent). By contrast, the representation of females among doctorate recipients in the physical sciences and engineering for 1999 was only 23.4 percent and 14.9 percent, respectively (figure 8). However, even these still-low percentages have shown remarkable change over time: 25 years ago, when females were only 19.5 percent of all doctorate recipients, they constituted 7.7 percent and 1.0 percent in the physical sciences and engineering, respectively. Similar long-term trends are discernible in other broad fields as well: in the life sciences from 18.3 percent in 1974 to 44.7 percent in 1999; 23.5 percent to 54.5 percent in the social sciences over that same period; and from 30.5 percent in the humanities in 1974 to the current 48.9 percent. (See table 7.)

In all seven of the broad fields, the number of doctorates awarded to men was lower in 1999 than in 1998. Females experienced declines in five of the seven broad fields; only in engineering and education were the numbers of doctorates granted to women in 1999 higher than in 1998.

Figure 8: Percent of female doctorate recipients by broad field, 1969, 1979, 1989, 1999

See Table 7.

SOURCE: NSF/NIH/USED/NEH/USDA/NASA, Survey of Earned Doctorates

In 1999 females represented 36.4 percent of S&E doctorate recipients and 48.2 percent of degrees in non-S&E fields. With respect to finer field distinctions, of the 25 selected subfields listed in table 6, women were the majority of doctorate recipients in 7 fields and constituted at least 40 percent of the doctorate population in 7 more areas. And in 11 of the 25 fields, the rate of increase in female doctorate recipients between 1989 and 1999 was over 40 percent.

While in the aggregate women constituted 42.7 percent of the doctorate recipient population in 1999, that proportion varies not only by field but also by race/ethnicity and citizenship. Among U.S. citizens, of doctorates earned by whites, 47.1 percent were awarded to women; for blacks, various Hispanic groups, and American Indians, women were in the majority, earning between 55 percent and 62 percent of doctorates received by persons of those races or ethnicities. Among Asian Americans, women were only 41.7 percent of the total. (See figure 11 and appendix table A-4.)

For U.S. citizens as a whole, 47.9 percent of all doctorates awarded in 1999 went to women, up from 47.7 percent in 1998 and continuing a long-term trend of U.S. women approaching parity with their male counterparts. For example, in 1979, among U.S. citizens, women earned only 31.0 percent of all doctorates. In fact, the number of male U.S. citizens earning doctorates was more than 3,000 higher in 1979 than it was in 1999, and in the 1990s while the number of doctorates going to U.S. males is relatively level, the number earned by U.S. women has increased every year except 1999. (See appendix tables A-4 and B-2.)

Among permanent residents earning doctorates in 1999, only 40.2 percent were female, and among those doctorate recipients holding temporary visas, only 26.8 percent were female (appendix table A-4). Women holding temporary visas are more concentrated in the S&E fields of study than women who are U.S. citizens. While women with temporary visas represented 13.9 percent of all female doctorates in 1999, they earned 28.4 percent of the doctorates earned by females in the physical sciences, 32.7 percent of the female-earned doctorates in engineering, and 20.9 percent of the doctorates earned by females in the life sciences (appendix table A-3c).

Doctorates by Race/Ethnicity

While the total number of doctorates fell between 1998 and 1999, for U.S. citizens the aggregate number of minority doctorate recipients increased by 5.1 percent. Within race/ethnic categories, Asians and American Indians showed the largest percentage gains, 12.8 percent and

15.9 percent, respectively; the corresponding figure for blacks was 7.6 percent. Hispanics were the only minority group to register a decrease in the number of doctorates in 1999, falling by 7.4 percent. By comparison, the number of white doctorate recipients fell by 1.8 percent. (See appendix table B-22.)

A total of 4,248 doctorates were awarded to members of U.S. racial/ethnic groupings in 1999. This figure is, as noted above, 5.1 percent higher than one year earlier; it is also 38.0 percent higher than the total five years earlier (1994) and nearly double (99.3 percent higher) the number for 1989.

With regard to broad field of study, U.S. minorities received more doctorates in 1999 than in 1998 in five of the seven groupings; in only one area – education – did the number fall; for engineering the 1998 and 1999 totals were identical (see table 8 and *Summary Report 1998* table 8). If 1994 is compared with 1999, two years in which the total numbers of doctorates awarded were virtually the same, minorities registered sizable gains in all seven broad fields, ranging from a 22.6 percent increase in the physical sciences to a 56.4 percent increase in the social sciences. Over that same period, the number of doctorates awarded to whites fell by 3.7 percent. (See table 8.)

Within racial/ethnic grouping, Asians and blacks showed increases in every one of the seven broad fields between 1998 and 1999 (see *Summary Report 1998*, tables 8 and 9, for the 1998 numbers drawn upon here). Hispanics and American Indians registered gains in some fields but declines in others (see table 8). With regard to the 24 subfields listed in table 9, Asians showed absolute increases in 16 of those disciplines, declines in 3, and no change in 5. Blacks showed absolute increases in 15, declines in 7, and no change in 2. By contrast, Hispanics experienced increases in only 10 and decreases in 13, and American Indians gained in 12, declined in 10, and were stable in 2. The number of white graduates declined in 18 of the 24 subfields and increased in only 6.

For a breakdown of minority representation by sex, see the previous section.

Table 10 lists the universities that awarded the largest number of doctorates to each of the four minority groupings over the last five years, 1995 through 1999, and the absolute number granted. Over that interval, three California institutions – Berkeley, UCLA, and Stanford – and two in Boston – Harvard and MIT – awarded more than 1,000 doctorates (1,091) to Asian Americans, or 18.1 percent of all doctorates awarded by U.S. universities in that racial category.

Nova Southeastern University and Howard University awarded by far the most doctorates to blacks (290 and 239, respectively), 7.5 percent of the U.S. total. In general, the leading institutions awarding doctorates to Hispanics lie in the Southwest, including California, and in Puerto Rico, and the top 10 account for 22.9 percent of all Hispanic doctorates. Oklahoma State University and the University of Oklahoma grant the largest number of doctorates to American Indians.

The concentration of U.S. minority doctorate recipients among institutions is considerably greater than for the doctoral population as a whole. In 1999, for example, the leading 10 universities granted 15.6 percent of all doctorates. But over the 1995-99 period, the 10 universities awarding the most degrees to minority students in each of the four groupings accounted for more than 20 percent of those totals. The top 10 institutions that awarded doctorates to Asians in table 10 granted 28.1 percent of all Asian doctorates between 1995 and 1999; for blacks the corresponding figure is 20.7 percent; for Hispanics it was 22.9 percent, and for American Indians it was 20.1 percent.

SOURCE: NSF/NIH/USED/NEH/USDA/NASA, Survey of Earned Doctorates

Doctorates by Citizenship

The SED collects information on the citizenship status and country of citizenship of the new doctorate recipients each year. Of the 1999 doctorate recipients with known citizenship status (94.8 percent of the total), 70.8 percent were U.S. citizens, 5.9 percent were permanent residents of the United States, and 23.3 percent were in the U.S. on temporary visas.⁹ See table 11.

⁹ Citizenship status (U.S. versus non-U.S.) and country of citizenship are variables with somewhat higher than average non-response in the SED, and the figures presented in this section thus have more uncertainty than others in the report. The numbers of cases with missing data on these variables has also fluctuated more year to year than other SED variables, and the over-time comparisons are thus also subject to some uncertainty. For example, in 1994 citizenship status was unknown for only 734 recipients, but this number rose to 2,651 in 1989 and 1,482 in 1974.

With regard to broad field of study, of the doctoral population with known citizenship status, U.S. citizens earned more than 80 percent of the doctorates awarded in the social sciences, humanities, and education (81.3 percent, 81.8 percent, and 88.6 percent, respectively) in 1999. Permanent residents and those holding temporary visas accounted for the largest proportions in the physical sciences, engineering, and life sciences. (See table 11.) In absolute numbers, U.S. citizens earned more doctorates in education than in any of the other broad fields; permanent residents had their highest total in the life sciences, and for those in the United States on temporary visas, engineering was the most popular field. U.S. citizens showed less field concentration than did non-citizens: three of the seven fields (life sciences, social sciences, and education) accounted for only 57.6 percent of doctorates awarded to U.S. citizens; physical sciences, engineering, and the life sciences accounted for 62.3 percent of doctorates earned by permanent residents, and 71.1 percent of degrees awarded to temporary visa holders.

Citizens of the People's Republic of China (PRC) earned 2,400 doctorates in 1999, or 5.8 percent of the total 41,140 degrees awarded.¹⁰ (See table 12 for a listing of the top 30 countries of origin of all doctorate recipients.) The top 15 countries in terms of the number of doctorates awarded to its citizens in 1998 remained the same for 1999, although Korea moved from fourth to third on the list, changing places with Taiwan (Republic of China), and a few other nations changed modestly in the rankings as well. The leading five countries accounted for 14.5 percent of all doctorates awarded by U.S. universities in 1999. Only 4.8 percent of the total doctoral population are citizens of next 10 nations listed in table 12, and only 2.9 percent are citizens of the next 15 nations. Doctoral students who are citizens of one of the 30 nations shown in the table thus account for 22 percent of the 41,140 doctorates awarded in 1999.

Table 13 lists the institutions awarding the largest numbers of doctorates to non-U.S. citizens in 1999; table 14 provides a complementary ranking – those institutions awarding the largest percentage of doctorates relative to the total number of Ph.D.s they granted.

Doctorates by Parental Education Background

Since 1963 the SED has asked new doctorate recipients to report their fathers' and mothers' levels of educational attainment. For purposes here, the responses are grouped into

¹⁰ Hong Kong, with 67 doctorate recipients, is not included in the PRC totals.

three categories: high school diploma or less; some college, including earning the baccalaureate; and advanced degree, including the master's, doctorate, or a professional degree. While only the data for 1999 are described here, analysis of the historical record would be a useful subject for further research on the social origins of the doctorate population.

The 1999 data (see table 15) show that 31.0 percent of recipients' fathers had earned a high school diploma or less; the corresponding figure for their mothers was 40.4 percent. Slightly over one-third (34.5 percent) of doctorate recipients had a father who had gone to college (but may not have earned a baccalaureate degree); 39.4 percent of the mothers of doctorate recipients in 1999 had some college background. Finally, for 34.5 percent of the doctorate recipients, the father held an advanced degree, compared with 20.2 percent whose mothers had an advanced degree.

Although similar in general, parental education backgrounds of male and female 1999 doctorate recipients differed with respect to mothers' education. Female doctorate recipients were more likely than their male counterparts to have a mother who attended college or who earned an advanced degree.

There is considerable variation in parental education attainment by race/ethnicity, citizenship status, and broad field of study. Compared with other racial/ethnic categories, Asian American doctorate recipients were more likely to come from families in which both the father and mother had advanced degrees; black, Hispanic and American Indian recipients' parents were the least likely to have gone beyond high school. U.S. citizen doctorate recipients were more likely than those with either permanent residency status or holding temporary visas to have parents with advanced degrees (and less likely than these two groups to have parents whose formal education did not extend beyond the high school level).

The distributions of parental education by the broad fields in table 15 reflect in part the different sex, race/ethnic, and citizenship compositions of the fields. Doctorate recipients in the humanities displayed the highest percentages of both fathers (43.2 percent) and mothers (25.4 percent) with advanced degrees. Education doctorate recipients had the lowest incidence of advanced degrees by fathers or mothers, 21.1 percent and 11.7 percent, respectively. These two broad fields are also the least and most represented, respectively, with regard to the fraction of parents whose formal education stopped at high school or before.

Time to Degree

The amount of time needed to complete a doctorate is a key concern not only for those pursuing the degree but also for the faculties and administrations of the degree-granting institutions, as well as national public agencies and private organizations that support doctoral study. Time to degree is likely to be affected by individual preferences and economic constraints, as well as by the labor markets and cultures of the academic disciplines and institution-specific program characteristics.

The SED indexes time to degree in three ways: (1) the total time elapsed from completion of the baccalaureate to completion of the doctorate, (2) the total time elapsed while actually registered in graduate school to completion of the doctorate, and (3) the simple age of the doctorate recipients. In this section, the 1999 data and the historical trends for each of these measures is reviewed for the whole population of doctorate recipients and separately by broad field and the background variables of sex, race/ethnicity, and citizenship.

The median total time span from baccalaureate to doctorate for the 1999 doctorate recipients was 10.4 years (table 16), the same as in 1998. The total time span was shortest in the broad area of physical sciences and mathematics (8.0 years) and longest in education (19.9 years) and professional/other fields (14.0 years). These latter two broad fields include large numbers of individuals who have worked full time before starting their graduate degree programs and even continue to work full time while earning their doctorates.

The historical data in table 16 show that the 1999 median total time to degree was about 5 months shorter than in 1994. The longer term trend has been one of increases in length from 1974 to 1994 (see figure 13 and table 16). The broad fields of engineering; physical, life, and social sciences; and humanities follow this overall pattern toward shorter times, but median time to degree for education and the professional/other fields increased from 1994 to 1999.

The median duration of being registered in graduate school was 7.3 years for the 1999 doctorates (table 16), also identical to the number for 1998. Registered time to degree was shortest in engineering (6.6 years) and the physical sciences and mathematics (6.8 years), and longest in the humanities (8.9 years) (table 16). The trend for time registered is one of small but steady increases over the 25-year span from 1974 to 1999 (see figure 13 and table 16) for all seven broad fields, with some flattening in the past five years in all broad fields except the professional/other fields category.

Figure 13: Median number of years to doctorate from baccalaureate award and age at doctorate, 1974-1999

See table 16.

SOURCE: NSF/NIH/USED/NEH/USDA/NASA, Survey of Earned Doctorates

The median time to degree indices vary somewhat by sex, citizenship, and race/ethnicity, but these differences are mainly reflections of the broad field differences reviewed above (table 17). Across the whole population of new doctorate recipients, females had longer total and registered times to degree than did males, but the sex differences disappear or reverse when males and females are compared within humanities and the physical, life, social sciences. Similar patterns hold for comparisons of U.S. and non-U.S. citizens, and of the U.S. racial/ethnic groups (see table 17).

The third measure of time to degree compiled in the SED is age at doctorate. The median ages of the 1999 doctorate recipients are tabulated in appendix tables A-3 by major field of degree and A-4 by citizenship and race/ethnicity. Overall, the median age at receipt of the doctorate in 1999 was 33.8 years old. Again, age at degree varies with field of study. Doctorate recipients in engineering and the sciences typically earn their degrees in their early 30s; the median for all 1999 doctorate recipients in those broad fields was 31.8 years old. Age at doctorate was 35.1 years in the humanities, 44.3 years in education, and 37.5 years in the

professional/other fields category. The modal age spans evident in figure 14 and table 18 reflect this ordering.

Figure 14: Age distribution at doctorate by broad field of study, 1999

Financial Resources in Support of Doctorate Recipients, Including Indebtedness

The SED asks two questions that, taken together, provide information on the financial sources of support utilized by the new doctorate recipients (for the exact formats and wordings, see the copy of the questionnaire in Appendix D). The first question is a checklist of 13 different potential sources of support, such as fellowships and scholarships, dissertation grants, teaching and research assistantships, and various personal arrangements. The second question asks which of the checked sources was the primary source of support and which was the second most important. For purposes here, respondents are grouped in terms of their primary sources of support. The 13 sources are combined into the seven categories that form the rows in table 19.

Well over half—60.9 percent— of the 1999 doctorate recipients received the majority of their support for doctoral study from program- or institution-based sources, such as teaching assistantships, research assistantships/traineeships, and fellowships/dissertation grants.¹¹ Just under a third (32.6 percent) of all 1999 doctorate recipients reported that their own resources (which include funds from loans, one's spouse, savings, and non-academic employment) were the primary sources they used to finance their doctoral studies. Foreign government, employer contributions, and “other” sources accounted for the remaining 6.5 percent of the cases. (See table 19.)

Overall, women were more dependent upon personal resources than were men (41.2 percent versus 26.1 percent). The same was true for U.S. citizens (40.6 percent) compared to foreign citizens on permanent or temporary visas (22.1 percent and 10.2 percent, respectively). However, sources of support vary considerably by field of study. For example, within engineering, a much higher than average percentage of new doctorate recipients reported program- or institution-based programs as primary sources of support (76.4 percent) and a greater percentage of men than women (13.2 percent versus 9.2 percent) reported their own resources as the primary source of support.

In the physical sciences, 85.6 percent of research doctorate recipients in 1999 listed teaching/research assistantships or fellowships as their principal form of support, as did 76.6 percent of those in the life sciences. By contrast, only 57.5 percent of doctorate recipients in the

¹¹ The Federal government and other governments can be the original source of these funds.

humanities, 52.0 percent of those in the social sciences, and 20.9 percent of those in education reported these categories as the primary sources of financial support for their doctoral program. In light of these different patterns in the broad fields of study, aggregate comparisons of graduate sources of financial support among demographic groups should be interpreted cautiously.

Non-U.S. citizens tend to be more concentrated in fields where the majority of doctoral students receive institution- and/or program-based support. Reflecting this concentration, non-U.S. citizens reported lower percentages of reliance on their own resources than did U.S. citizens. This pattern was consistent across all of the broad fields of study.

With regard to race/ethnicity, black doctorate recipients indicated the greatest reliance on their own resources to finance their doctoral program (48.6 percent), followed by American Indians (44.4 percent), whites (41.0 percent), Hispanics (40.7 percent), and Asians (22.7 percent). Within most of the broad fields of study, the race/ethnicity differences in reliance on own resources diminish. Some large race/ethnic differences within fields are found, however, in terms of use of the different types of program- and institution-based supports. In the physical sciences and engineering, Asians and whites were more likely than blacks and Hispanics to rely on teaching and research assistantships and less likely to have fellowships or dissertation grants as their primary source of support.

The SED also asks the new doctorate recipients to indicate the amount of money they owe that is directly tied to their undergraduate or graduate education. This is defined as debt related to tuition and fees, living expenses and supplies, and transportation to and from school. The response categories begin with “none” and proceed upward in \$5,000 increments, with “\$30,001 or more” at the top. A total of 37,188 (90.4 percent) 1999 graduates responded to the question.

Half (49.9 percent) of the 1999 respondents reported having no education-related debt, and another 24.0 percent reported cumulative debt of \$15,000 or less (table 20). However, a distinct bulge at the high end of the debt distribution is also evident, with 13.3 percent of all new doctorate recipients reporting debt over \$30,000.

Looking at the debt distributions within each of the seven broad fields, graduates in the physical sciences, engineering, education, and the life sciences are most likely to complete the doctorate with no education-related debt (table 20). Social scientists and humanities graduates are much less likely to have no debt. Debt levels in excess of \$30,000 or more are most common among social scientists (24.3 percent), graduates in the professional/other fields areas (17.6 percent), and the humanities (15.5 percent).

The pattern of debt levels for the main demographic groups are shown in table 21. Particularly noteworthy in these tabulations is the much higher probability of blacks, Hispanics, and American Indians to incur high levels of education-related debt. Over a quarter (26.5 percent) of black doctorate recipients, 23.8 percent of American Indians, and 20.4 percent of Hispanics owed more than \$30,000; these figures compare to 12.0 percent of Asians and 14.9 percent of whites owing that much. At the other extreme, Asians and whites are much more likely than the other groups to have no education-related debt upon completion of the doctorate.

Postgraduate Plans, Employment, and Location

The SED questionnaire includes a number of questions about the graduates' immediate plans for work or further study.¹² The responses provide a useful overview of the numbers planning to enter academic positions, government and industry, and postdoctoral programs of research and further study. Information is also collected on the main types of work activities -- research, teaching, administration, and professional services to individuals -- that the graduates anticipate in their new positions.

Three aspects of postgraduation plans are examined in this report. The first is whether the new doctorate recipient has a definite or indefinite commitment for employment or a postdoctoral position. These data are examined by broad field of study, sex, citizenship, and race/ethnicity (tables 22 and 23). The second aspect is the distribution of graduates with definite commitments for career employment versus for postdoctoral research and study programs. This distribution is also examined separately by broad field of study, sex, citizenship, and race/ethnicity (tables 24 and 25), as well as by visa status and anticipated location (foreign versus U.S.) for non-U.S. citizens (tables 26 and 27). The third aspect is the distribution of graduates across employment sectors, broken down by sex, race/ethnicity, and citizenship status (table 28).

Definite versus Indefinite Plans

Over two-thirds (69.9 percent) of all doctorate recipients in 1999 reported having definite commitments for employment or postdoctoral study or research. This rate is consistent with those for recent years, but somewhat lower than the rates in the 1980s and 1970s (table 22). With the notable exception of the humanities, the percentages with definite commitments in 1999 vary little by broad field. In the humanities, only 60.6 percent have a definite commitment.

The percentages with definite commitments also differed little among demographic groups (table 23). About 2 percent fewer women than men (68.5 versus 71.0 percent) had

¹² The items in the postgraduation plans section of the questionnaire are not classified as critical items which become the focus of missing data follow-ups. Thus, the response rates to the postgraduation plans items mirror the returns of the actual questionnaire, minus a low rate of item nonresponse. For the 1998-99 cycle, the overall response rate for the first item, asking whether the respondent has definite plans for either career employment or study, was 90.3 percent.

definite plans. U.S. citizens were more likely to have definite commitments (71.4 percent) than individuals with permanent or temporary visas (66.5 percent). Among U.S. citizens and permanent residents, whites were most likely to have definite plans (72.0 percent), while American Indians, blacks, Asians, and Hispanics were less likely.

Career Employment versus Postdoctorates

Among the doctoral recipients reporting definite plans, the majority (69.8 percent) indicated that they plan to enter career employment as opposed to pursuing further study within a postdoctoral research or teaching program (table 24). Postdoctorate study was more common among graduates in the life sciences (63.8 percent) and the physical sciences (46.5 percent) than in the other broad fields. The percentages of new doctorate recipients entering postdoctorate study programs has increased in all of the broad fields since 1979 (table 24).

Differences among demographic subgroups are evident in table 25. Men were slightly more likely than women to have definite plans for a postdoctorate (32.0 versus 27.5 percent). Students with temporary or permanent visas were much more likely than U.S. citizens to pursue postdoctorate studies (39.3 versus 26.9 percent). Among U.S. citizens and permanent residents, Asian new doctorate recipients were more likely than other race/ethnicity subgroups to plan postdoctorates. Black and American Indian doctorate recipients were least likely to report postdoctorates. These differences among citizenship and race/ethnicity subgroups are reflections of the greater number of postdoctorates in the physical and life sciences, and the greater concentrations of non-U.S. citizens and Asian-American students in those fields.

Postdoctoral Location of Non-U.S. Citizens

As the number of international students earning research doctorates in the United States has steadily increased over the past two decades, so has the tendency for those students to remain in the United States following graduation. Table 26 shows that 91.9 percent of all new doctorate recipients holding permanent visas and 69.4 percent of temporary visa holders indicated that they will remain in the United States following graduation. The fields with the highest concentrations of new doctorate recipients with temporary visas staying in the United States were chemistry (92.3 percent), biology (85.8 percent), physics (76.9 percent), and computer science (76.9 percent) (see table 26).

The trend shown in table 27 is one of increasing percentages of new doctorate recipients with temporary visas planning to stay in the United States after receiving the doctorate. In 1974, 38.2 percent of those on temporary visas had firm commitments to positions in the United States. Twenty-five years later, that number had grown to 67.3 percent.

Employment Sectors in the United States

Higher education remains the most common destination of the 1999 doctorates with definite commitments within the United States, identified by 49.2 percent of the 1999 respondent subpopulation (see table 28). The next largest group, 27.8 percent, had commitments to industry or some form of self-employment, and 7.5 percent planned to work for Federal, state, or local government. The historical trends show reductions in academic and in government employment, coupled with an increase in the industry/self-employment sector.

Among the U.S. racial and ethnic groups, Asians were less likely than others to go immediately into higher education and were more likely than all others to go into industry or self-employment. Industry was also the main destination of non-U.S. citizens with definite plans to remain in the United States after graduation.

Special Section: Interstate Migration Patterns of Doctorate Recipients

Introduction and Overview

Mobility is a vital element in any population and labor force. How willingly families will migrate from one location to another, and how easily workers are able to respond to market signals and make the transition from one opportunity to another -- or to turn a disappointment in one area into a new challenge in another -- for advancement and/or to seek additional training, constitute important indicators and predictors of economic growth and development. From the very beginning of this nation, Americans have exhibited a willingness to move -- from settlements and industrial cities in the East to sparsely populated regions, and then from agriculture back to urban areas

On the international front, immigration, including "brain drain" -- and "brain gain" -- concerns, cohort sizes and composition (such as changes in the age, educational or labor force attachments of the new arrivals) are of paramount importance. Domestically, "brain drain" issues are also of particular current interest to individual states across the country, which has implications for allocations for higher education and other public expenditures, as well as other legislative initiatives. Governors, state legislators and others express concern over the loss of their well-educated citizens to other states, or whether they are providing substantial subventions to out-of-state students who then return home -- or move elsewhere -- after they complete their undergraduate or graduate/professional studies. Support for higher education is occasionally couched in such terms and calculations.

This special section focuses on the extent and pattern of interstate migration of doctorate recipients from United States universities from birth through initial postgraduate employment.¹³ This is arguably one of the highest skilled segments of the American labor force, and one for which personal and professional decisions to migrate is of great importance.

¹³ For a recent comprehensive discussion and overview of many international aspects of migration, see *Graduate Education Reform in Europe, Asia and The Americas and International Mobility of Scientists and Engineers: Proceedings of an NSF Workshop*, National Science Foundation, April 2000.

The Data Set

The Survey of Earned Doctorates (SED) questionnaire (see Appendix D) asks for state of residence information at five points in a respondent's personal event history: (1) state of birth; (2) state in which they received their high school diploma; (3) state where they first enrolled in college; (4) state where they earned their doctorate; and (5) state in which they accepted their initial postdoctorate employment. The data drawn on here are from the 1999 SED.¹⁴

From the universe of 41,140 doctorate recipients in 1999, we confined our investigation to native-born U.S. citizens who also provided information on where they were born, where they completed high school, where they started college, and where they planned to work after receipt of the doctorate. This yielded a subset of 23,153 individuals, or 89.6 percent of the 25,843 known native-born U.S. citizens earning doctorates in 1999. We used this data set to examine the general pattern and overall level of migration among the new doctorate population, and the extent to which mobility varies by sex, race/ethnicity, marital status, parental education, employment sector, and academic discipline.

From Birth to College

Overall, 13.4 percent of doctorate recipients in our study were born, graduated from high school, entered college, received a doctorate, and planned to work all in the same state. By contrast, 8.7 percent of that same population noted an entirely different state for each of these five chronological markers. (See table 2-1, which also includes these patterns by sex and other characteristics.)

About a third (34.0 percent) of these doctorate recipients were graduated from high school in a state other than the one in which they were born¹⁵ (see table 2-2). Almost the same proportion (36.1 percent) of new recipients first entered college in a state other than the one in which they earned a high school diploma, a figure that is higher than the percentage for college freshmen as a whole.¹⁶ Thus, at the initial undergraduate level, in terms of educational horizons, these doctorate recipients did not resemble their age cohorts (see table 2-2).

¹⁴ A complementary data set to the SED, the Survey of Doctorate Recipients (SDR), includes information on longitudinal characteristics of doctoral cohorts, including occupational history.

¹⁵ This percentage is a lower bound on migration because it does not capture intrastate moves nor instances in which a family could have moved from one state to another and then back again in this period.

¹⁶ See the *Digest of Education Statistics 1990*, Tables 187, 188, and 189, for data on residence and

From College to Doctoral Study and Employment

More than two-thirds (68.8 percent) of the U.S. citizens receiving doctorates in 1999 received their doctorate from an institution located in a state other than the one in which they first entered college. About half of them – 44.8 percent – intended to remain and work, at least initially, in the state in which they earned their doctorate; 55.2 percent intended to move to another state. (See table 2-2.) With regard to returning to prior “roots,” 28.3 percent were returning to (or remaining in) the state in which they went to college, 29.2 percent to the state in which they went to high school, and 24 percent to their birth state (see table 2-3).¹⁷ These percentages imply that there is no single time period in which “brain drain” – or “brain gain” – occurs, but rather that migration appears to be more of a continuous process.

Migration and Sex

With respect to demographic characteristics, male and female doctorate recipients exhibited similar migration patterns between birth and graduation from high school, as one would expect (that is, family decision-making with regard to moving should be largely independent of the sex of their child). The same pattern is observed for in-state versus out-of-state college matriculations by sex: 36.5 percent of males and 35.6 percent of females went to college in a state other than the one in which they received their high school diploma. Larger differences by sex begin to appear between college and doctorate institution choices and between doctorate institution location and initial employment: 50.9 percent of females but 59.2 percent of males intended to work in a state different from the one in which they earned the doctorate. (See table 2-2.) Overall, male doctorate recipients were less likely than females to return to the state(s) in which they were born, attended high school, or first matriculated in college. (See table 2-3.)

Migration and Race/Ethnicity

Between birth and high school graduation, Asian American doctorate recipients were more likely to have moved across state lines than other American race/ethnicity groups; 41.9

migration of all freshmen students in fall 1988. The 1988 class of freshmen is the closest available to the modal year of college entry for the 1999 doctorate recipients (1983).

¹⁷ A 1967 report, *Doctorate Recipients from United States Universities 1958-66* (Publication 1489, National Academy of Sciences, Washington, D.C.), showed that 38.9 percent of doctorate recipients from 1964-66 earned their doctorate in the same state in which they received their high school diploma.

percent of Asians received a diploma in a state other than the one in which they were born compared with 28.2 percent of blacks, 27.1 percent of Hispanics, 34.4 percent of whites, and 33.5 percent of American Indians. Asians, blacks, and whites show more migration between high school and college than do Hispanics and American Indians. Whites are the most likely to move across states between college and doctoral program. (See table 2-2.)

With respect to geographical location for initial postgraduate employment, the similarities are more striking than the differences. However, Hispanics are the most likely of all the racial/ethnic groups to return after the doctorate to the state in they were born, were graduated from high school, or enrolled in college. (See table 2-3.)

Migration and Marital Status

More than three in five (63.9 percent) of doctorate recipients in our subset were married or living in a marriage-like relationship at the time they received the degree; another 7.9 percent were either separated, widowed, or divorced; 28.2 percent had never been married. The “never married” group exhibited a greater tendency to enroll in an out-of-state college (39.7 percent versus 35.0 percent for the married/marriage-like group, and 31.5 percent for the separated/widowed/divorced category), 71.6 percent earned a doctorate in a state other than the one in which they went as an undergraduate (versus 68.0 percent and 64.4 percent, respectively, for other two groups), and 64.3 percent intended to work in a state different from the one in which they earned their terminal degree (versus 51.8 percent and 50.1 percent). (See table 2-2.) Overall, those who had never been married exhibited the lowest tendencies to stay in the state of birth or in which they had gone to high school or college. These differences may reflect a tendency for those without spouses to be less constrained by personal obligations that could affect their willingness to migrate (that is, an employed spouse, children, or other aspects of joint decision-making within the family could lead to more geographic stability); the data are consistent with this hypothesis (see table 2-3).

Migration and Family Background

The SED provides information on the level of educational attainment of doctorate recipients’ parents. For present purposes, we segmented recipients into two groups: those from families in which neither parent had received a baccalaureate degree (that is, the highest level of

educational attainment in the family included those with less than a high school diploma, a high school diploma, or some college) and those whose parents had earned a bachelor's degree or higher (36.2 percent and 63.8 percent, respectively). The percentage of doctorate recipients from families with the higher educational backgrounds who graduated from high school in a state other than the one in which they were born than was almost twice the percentage for recipients whose parents' educational attainments were more modest (41.0 percent versus 21.8 percent, respectively). This pattern occurs at the other educational markers in these doctorate recipients' lives: students from more highly educated family backgrounds were more likely to have attended an out-of-state college (42.9 percent versus 24.1 percent), enrolled in college and earned doctorate degrees in different states (72.6 percent versus 62.0 percent), and planned to work in a state other than the one in which they earned the doctorate (58.6 percent versus 49.1 percent). (See table 2-2.) With regard to being employed in a state in which they had earlier roots – birth, high school, or college – doctorate recipients from families with higher levels of formal education exhibited far lower tendencies to return “home.” (See table 2-3.)

Migration and Employment

The SED also solicits information on the intended employment sector – academic, government, private industry or “other”¹⁸ – of each new doctorate recipient. There is little difference with respect to interstate migration between birth and high school, from high school to college, or college to doctoral program, or for employment by employment sector, except in the more heterogeneous “other” category, which consistently exhibits less interstate migration than the other three more well-defined employment groupings. (See tables 2-2 and 2-3.)

Migration and Academic Fields of Study

A breakdown of migration across broad academic fields of study – by engineering, the nine science fields, the humanities, and a residual “other” category -- is given in table 2-4. As in table 2-2, the columns contain the percentages of doctorate recipients moving between the two time points described in each column heading. Among the S&E doctorate recipients, students who earned doctorates in the agricultural sciences and chemistry were the least likely to leave their state of birth by high school and college matriculation (29.9 percent and 30.2 percent,

¹⁸ “Other” occupations include working for a non-profit organization, teaching in an elementary or secondary school, or employed by the United Nations or another international agency.

respectively). A similar percentage (28.5 percent) of the doctorate recipients in the heterogeneous “other” field category, two-thirds of which represents doctorate recipients in education,¹⁹ left their state of birth by high school and college matriculation. Those in the “other” fields also were the most likely to enter college and graduate school within the same state.

The third column of numbers in table 2-4 shows the percentages of the 1999 doctorate recipients who earned their doctorates in different states than where they first entered college. These percentages are generally much higher than the rates of out-migration between high school and college entry. The graduates from physics/astronomy and the humanities were the most likely to change states between where they entered college and where they completed the doctorate (77.5 percent and 76.1 percent, respectively). The “other” category, dominated by education doctorate recipients, showed the lowest migration levels between these two points (60.6 percent moved), followed by engineering students (67.2 percent), and psychology (68.7 percent).

With respect to interstate moves between earning the doctorate and place of employment after graduate school, the last column in table 2-4 shows that students whose degrees were in chemistry, physics/astronomy, and social science were the most likely to migrate. In contrast, those in the “other” category were the least likely to find employment in a different state than where they received the doctorate.²⁰

Summary and Conclusions

The labor force of doctorate recipients in the United States, as represented by the 1999 cohort, is a highly mobile one. Before they reached their mid-thirties (as noted in an earlier section, the median age at time-to-degree for this cohort was slightly less than 34 years), many of these scholars had moved across state boundaries to attend college, select the doctoral program of their choice, and accept employment. Earlier in life, a third of them graduated from high school in a state other than the one in which they had been born, and more than a third went out

¹⁹ Sixty-eight (67.8) percent of the 6,578 students in the “other” field grouping are in education; 12.7 percent are in the health sciences, and 19.5 percent in professional fields such as business, communications, and theology.

²⁰ For a state-by-state and broad field breakdown of doctorate recipients in 1998 who were planning to work in the same state from which they were graduated from high school, see Table 28, page 61, in Sanderson, A., B. Dugoni, T. Hoffer and L. Selfa. 1999. *Doctorate Recipients from United States Universities: Summary Report 1998*. Chicago: National Opinion Research Center.

of their home state for undergraduate studies. Fewer than one in seven doctorate recipients lived, was educated, and planned to be employed professionally in the same state. Upon completion of their doctorate, fewer than one-third planned to return to a state in which they had been born, went to high school, or attended college. Marital status and the educational attainment of these recipients' parents appear to influence migration significantly. The analyses of migration presented in this special section are consistent with those of earlier doctoral cohorts by other researchers and suggest that migration among the doctorate population is both extensive and stable.²¹

²¹ A 1991 report, *Migration of U.S. Citizen S/E Doctorate-holders Among States And Regions* (Susan Hill, National Science Foundation), reported that among science and engineering doctorate recipients from 1986-88, 65 percent earned a bachelor's degree in the same state as the state in which they received a high school diploma; 30 percent went to high school and completed their doctoral program in the same state; and 22 percent intended to return to the state where they last attended high school after completion of the doctorate; and 38 percent were going to work or continue postgraduate study in the same state as their doctoral institution. For the 1999 cohort, those S&E percentages were 62.6 percent, 25.8 percent, 25.8 percent, and 40.6 percent, respectively.

APPENDICES

APPENDIX A: The Seven Basic Tables, 1999

Appendix A includes the following seven tables:

- A-1 Number of Doctorate Recipients, by Sex and Subfield, 1999
- A-2 Number of Doctorate Recipients, by Citizenship, Race/Ethnicity, and Subfield, 1999
- A-3 Statistical Profile of Doctorate Recipients, by Major Field, 1999
- A-4 Statistical Profile of Doctorate Recipients, by Race/Ethnicity and Citizenship, 1999
- A-5 Doctorate Recipients' Financial Resources in Support of Doctoral Programs, by Broad Field and Sex, 1999
- A-6 State of Doctoral Institution of Doctorate Recipients, by Broad Field and Sex, 1999
- A-7 Institutions Granting Research Doctorates, by Major Field, 1999

TABLE A-1 and TABLE A-2: Tables A-1 and A-2 display data for the most recent year by subfield of doctorate. Field groupings may differ from those in reports published by Federal sponsors of the Survey of Earned Doctorates (SED). The “general” field categories—e.g., “chemistry, general”—include individuals who either received the doctorate in the general subject area or did not indicate a particular specialty field. The “other” field categories—e.g., “chemistry, other”—include individuals whose specified doctoral discipline was not among the specialty fields listed.

Table A-1 presents data by doctoral specialty and sex. Table A-2 displays doctoral specialty by citizenship and race/ethnicity. For a detailed description of the racial/ethnic variable, see the explanatory note for Table A-4.

TABLE A-3: Table A-3 is composed of three 2-page tables. The first table (A-3a) includes data on *all* research doctorate recipients from the most recent year; the other two tables (A-3b and A-3c) present the same data by sex. Field groupings may differ from those in reports published by Federal sponsors of the SED. Terms requiring definition are as follows:

— *Percentage with Master's*: The percentage of doctorate recipients in a field who received a master's degree in any field before earning the doctorate.

— *Median Age at Doctorate*: One-half received the doctorate at or before this age. A recipient's age is obtained by subtracting the month/year of birth from the month/year of doctorate (see note on next page).

— *Median Time Lapse*: "Total Time" refers to the total calendar time elapsed between the month/year of baccalaureate and the month/year of doctorate. "Registered Time" refers to the actual time in attendance at colleges and universities between receipt of the baccalaureate and the doctorate.

— *Postgraduation Plans*: Each year's doctorate recipients provide information on post-graduation employment or study plans in response to items B1 through B9 on the survey form. Since the questionnaire is filled out around the time the doctorate is awarded, a recipient's plans are subject to change. However, comparisons with the longitudinal Survey of Doctorate Recipients (SDR) have shown SED data to be a reasonable indicator of actual employment status in the year following the doctorate, although results vary by sector. (The SDR is a follow-up employment survey of a sample of doctorate recipients in science, engineering, and, until 1995, humanities fields.)

In Table A-3 the postgraduation plans of doctorate recipients are grouped as follows: "Postdoctoral Study Plans" (fellowship, research internship, traineeship, other), "Planned Employment after Doctorate" (educational institution, industry, etc.), and "Postdoctoral Plans Unknown." These categories include recipients who were still negotiating or seeking positions at the time of survey completion, as well as those whose plans were definite. The sum of these lines equals 100 percent for each column, with allowance for rounding: for example, 28.0 percent of all psychology doctorate recipients had postdoctoral study plans, 54.2 percent planned to be employed, and 17.8 percent did not report their post-graduation plans, totaling 100 percent. The postdoctoral study row is further subdivided by type of study or appointment (fellowships, research associateships, traineeships, and other study). The percentages in these subdivisions sum to the percent of respondents in the given column who reported plans for postdoctoral study. The employment row is similarly subdivided by type of employer. The percentages for these rows add to percentage of respondents in the given column who planned employment. The

category for educational institutions includes elementary and secondary schools as well as colleges and universities, and the category for government includes military service.

The four lines of data beginning with “Definite Postdoctoral Study” distinguish between individuals who had definite postgraduation plans at the time of survey completion (item B1: “Am returning to, or continuing in, predoctoral employment” or “Have signed contract or made definite commitment”) and those who were still seeking employment or postdoctoral study (item B1: “Am negotiating with one or more specific organizations,” “Am seeking position but have no specific prospects,” or “Other”). These four lines, when added to the prior line, “Postdoctoral Plans Unknown,” total 100 percent with allowance for rounding. The two lines “Definite Postdoctoral Study” and “Seeking Postdoctoral Study” add to give the percentage for “Postdoctoral Study Plans”; the two lines “Definite Employment” and “Seeking Employment” add to give the percentage for “Planned Employment After Doctorate.”

Percentages showing the distribution of doctorate recipients by postdoctoral work activity and region of employment are based only on the number of recipients who had *definite employment commitments* at the time they completed the questionnaire. These percentages exclude recipients who planned postdoctoral study (as described above) and recipients who were still *seeking* employment at the time they completed the questionnaire. (Note that the rows on specific postdoctoral study and employment plans discussed earlier include individuals whose plans were *not definite*.)

The U.S. regions of employment shown in Table A-3 include the following states and territories:

<i>New England:</i>	Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont
<i>Middle Atlantic:</i>	New Jersey, New York, Pennsylvania
<i>East North Central:</i>	Illinois, Indiana, Michigan, Ohio, Wisconsin
<i>West North Central:</i>	Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota
<i>South Atlantic:</i>	Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia
<i>East South Central:</i>	Alabama, Kentucky, Mississippi, Tennessee

<i>West South Central:</i>	Arkansas, Louisiana, Oklahoma, Texas
<i>Mountain:</i>	Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Wyoming
<i>Pacific & Insular:</i>	Alaska, California, Hawaii, Oregon, Washington, American Samoa, Guam, Puerto Rico, Trust Territory, Virgin Islands

TABLE A-4: Table A-4 contains data by race/ethnicity and citizenship for selected variables included in Tables A-3 and A-5. Field groupings may differ from those in reports published by Federal sponsors of the SED.

The racial/ethnic question has undergone several revisions over the years. In 1977 it was modified to correspond to a standard question format recommended by the Federal Interagency Committee on Education and adopted by the Office of Management and Budget (OMB) for use in Federally sponsored surveys; an explanation of the effect of these changes is detailed on page 13 of *Summary Report 1977*. (Note: Changes in the OMB guidelines prompted the reclassification of persons having origins in the Indian subcontinent from the white category to the Asian category.) In 1980 the item was further revised in two ways: (1) the Hispanic category was subdivided into Puerto Rican, Mexican American, and other Hispanic to provide more detail for users of the racial/ethnic data; and (2) respondents were asked to check only one racial category. (Before 1980, doctorate recipients could check more than one category to indicate their race.)

The item was modified again in 1982 to separate the questions on race and ethnicity. Since then respondents have been asked to first indicate whether or not they are Hispanic, and then check one of the four racial group categories (American Indian, Asian, black, or white). In Table A-4, doctorate recipients who reported Hispanic heritage, regardless of racial designation, are included in one of three Hispanic groups: Puerto Rican, Mexican American, or other Hispanic. The remaining survey respondents are then counted in the respective racial groups. (Note: Doctorate recipients who checked the category “American Indian or Alaskan Native” are identified as American Indian in this report.)

In the section of “Doctoral Program Support” a recipient counts in more than one category if support was received from multiple sources. Because a student counts more than once

for sources of support, the vertical percentages sum to more than 100 percent. See the explanatory note on Appendix Table A-5 for further detail. (Data on the *primary* source of support for doctorate recipients are presented in the body of the report.)

The other sections in Table A-4 correspond to many of those in Appendix Table A-3. The reader is referred to the explanatory note on Table A-3 for additional information.

TABLE A-5: Table A-5 displays data reported in item A11 on financial resources used in support of the respondent's doctoral program, by broad field and sex of recipient. Field groupings may differ from those in reports published by Federal sponsors of the SED.

A recipient counts in more than one category in Table A-5 if more than one financial resource was reported. Because a student counts once for each of his/her financial resources, the vertical percentages sum to more than 100 percent. (Data on the *primary* financial resources for doctorate recipients are presented in the body of the report.) Please consult Appendix C: Technical Notes for additional information on changes in the coding of Sources of Support/Financial Resources.

TABLE A-6: Table A-6 shows, by broad field and sex, the number of persons receiving a research doctorate in the most recent year from institutions in each of the 50 states, the District of Columbia, and Puerto Rico. Field groupings may differ from those in reports published by Federal sponsors of the SED. See Appendix E of the Summary Report for a description of field groupings as reported in this table; see the questionnaire's Specialties List in Appendix D of the Summary Report for the names and codes of the subfields included.

TABLE A-7: Table A-7 displays data by doctorate-granting institution and major field. It includes all institutions in the United States (the 50 states, the District of Columbia, and Puerto Rico) that awarded research doctoral degrees in the most recent year, except Arkansas State University which did not participate. Field groupings may differ from those in reports published by Federal sponsors of the SED and from departmental designations at institutions.

NOTE: Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates. See inside the back cover for a description of fields as reported in this table.

Refer also to the explanatory note about this table in front of Appendix A.

*Includes 2,150 individuals who did not report their citizenship at time of doctorate. See the "Important Notice" for discussion of item response rate issues.

‡Includes Pacific Islander.

†Includes Alaskan Native.

#Physical Sciences includes Mathematics and Computer Sciences, as well as Physics/Astronomy, Chemistry, and Earth/Atmospheric/Marine Sciences.

*Includes 2-year, 4-year, and foreign colleges and universities, medical schools, and elementary/secondary schools. +Includes only recipients with definite employment plans.

NOTE: Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates.

*Includes 187 individuals who did not report their sex and 2,150 individuals who did not report their citizenship at time of doctorate

**In this table a recipient counts once in each source category from which he or she received support.

Since students indicate multiple sources of support, the vertical percentages sum to more than 100 percent.

(Data on the "primary" source of support for doctorate recipients are presented in the Summary Report.)

#Includes 2-year, 4-year, and foreign colleges and universities, medical schools, and elementary/secondary schools.

*Includes only recipients with definite employment plans.

†Includes Alaskan Native.

‡Includes Pacific Islander.

++ Includes mathematics and computer sciences.

NOTE: In this table a recipient counts once in each source category from which he or she received support. Since students indicate multiple sources of support, the vertical percentages sum to more than 100 percent. (Data on the "primary" source of support for doctorate recipients are presented in the body of the Summary Report.) Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates. The table excludes 187 individuals for whom gender was not reported.

*Includes mathematics and computer sciences.

**V denotes vertical percentage; H denotes horizontal percentage.

***The 4,206 Ph.D.s who did not report sources of support are omitted from this total. Percentages are based only on known responses.

†This category includes spouses and significant others.

APPENDIX B: Trend Tables, 1989-1999

Appendix B includes the following two tables:

- B-1: Number of Doctorate Recipients, by Subfield, 1989-1999
- B-2: Number of Doctorate Recipients, by Sex, Race/Ethnicity, and Citizenship, 1979, 1984, and 1989-1999

TABLE B-1: Table B-1 presents data for the most recent decade by subfield of doctorate. In general, the subfields correspond to the fields on the questionnaire's Specialties List located in the questionnaire at the back of the Summary Report; some subfields, however, do not appear on the current Specialties List because they are no longer included in the survey taxonomy. A dash (—) in a column indicates that the field was not on the Specialties List for that year.

Field groupings in this table may differ from those in reports published by Federal sponsors of the Survey of Earned Doctorates (SED); see inside the back cover of the Summary Report for a description of field groupings as reported in these tables. The "general" field categories—for example, "chemistry, general"—include individuals who either received the doctorate in the general subject area or did not indicate a particular specialty field. The "other" field categories—for example, "chemistry, other"—include individuals whose specified doctoral discipline was not among the specialty fields.

The seven tables in Appendix A present additional information on the most recent cohort of research doctorate recipients by field of doctorate.

TABLE B-2: Table B-2 displays, by sex and citizenship, data on the race/ethnicity of doctorate recipients for 1979, 1984, and the past decade. Table B-2 contains three panels, each displayed on a separate page. The first panel includes all doctorates; the others disaggregate the data by sex.

The racial/ethnic question has undergone several revisions over the years. In 1977 it was modified to correspond to a standard question format recommended by the Federal Interagency Committee on Education and adopted by the Office of Management and Budget (OMB) for use

in Federally sponsored surveys; an explanation of the effect of these changes is detailed on page 13 of *Summary Report 1977*. (Note: Changes in the OMB guidelines prompted the reclassification of persons having origins in the Indian subcontinent from the white category to the Asian category.) In 1980, the item was further revised in two ways: (1) the Hispanic category was subdivided into Puerto Rican, Mexican, and other Hispanic to provide more detail for users of the racial/ethnic data; and (2) respondents were asked to check only one racial category. (Before 1980, doctorate recipients could check more than one category to indicate their race.) The item was modified again 1982 to separate the questions on race and ethnicity. Since then respondents have been asked to first indicate whether or not they are Hispanic, and then check one of four racial group categories (American Indian, Asian, black, or white). In Table B-2, *doctorate recipients who reported Hispanic heritage, regardless of racial designation, are counted as Hispanic*. The remaining survey respondents are then counted in their respective racial groups. (Note: Doctorate recipients who checked the category “American Indian or Alaskan Native” are identified as American Indian in this report.)

Tables A-2 and A-4 in Appendix A present additional information on the most recent cohort of doctorate recipients by race/ethnicity.

APPENDIX TABLE B-1. Number of doctorate recipients, by subfield, 1989-1999

APPENDIX C: Technical Notes

I. Survey Response Rates

Survey Response Rates*			
Year	Self-Report Rate	Year	Self-Report Rate
1967	97.3	1984	95.1
1968	97.6	1985	94.8
1969	96.6	1986	93.5
1970	98.1	1987	93.1
1971	97.5	1988	92.9
1972	97.3	1989	92.3
1973	97.5	1990	93.6
1974	94.2	1991	94.6
1975	97.3	1992	95.1
1976	97.2	1993	94.7
1977	96.6	1994	94.6
1978	96.3	1995	94.1
1979	96.4	1996	92.9
1980	96.2	1997	91.5
1981	95.7	1998	91.8
1982	95.3	1999	91.7
1983	95.5		

* The rates for 1967-98 reflect late responses. The rate for 1999 may increase slightly in the next year if additional questionnaires are received after survey closure. Self-report rates for 1980-99 are determined from the "source of response" indicator in the doctorate records. Because this indicator was not coded prior to 1980, survey forms for 1965-79 are assumed to be self-reported if "month signed" or "marital status" is present. "Marital status" is not available from sources other than the doctorate recipient.

As shown in the table above, 91.7 percent of 1999 U.S. research doctorate recipients completed survey forms. This percentage is what has been referred to as the "self-report" rate. For the remaining doctorate recipients, "skeleton" records were created using basic information obtained from doctorate-granting institutions or from commencement programs. This skeleton information includes Ph.D. institution, Ph.D. field, Ph.D. year, and sex of Ph.D. recipient. It should be noted that the sex variable was not always available, even for survey respondents. Every effort was made to obtain this information for as many respondents as possible, but for a small percentage, this could not be done with confidence. Thus, you will notice that there are missing data for many of the tabulations involving sex in this year's report. Prior to 1997, whenever sex was missing, the data were assigned to "male." In 1997, it was decided to

discontinue this practice. The tabulations involving sex for 1997 through 1999 exclude missing cases except where noted otherwise.

Wherever possible this report includes data from all Ph.D. records whether complete or skeletal; thus the reported total number of Ph.D. recipients for 1999 (41,140) includes both respondents and non-respondents. It should also be noted that, in keeping with the practice of earlier data collection cycles, counts for previous years were corrected by the addition of data from surveys received after the close of data collection for a given year.

II. Item Response Rates

The table on the following pages shows the response rates for each item in the Survey of Earned Doctorates for 1989 through 1999. The numbers and percentages shown in the tables and figures in the body of the summary report are based only on the number of research doctorate recipients who responded to the applicable survey items. For cross-tabulations, the response rate for a given tabulation will be no greater than the lowest response rate for the items involved in the tabulation.

NOTE: NA = not available.

- ^a The percentage represents the race/ethnic groups standardly reported by the Doctorate Data Project; multiple and "other" races are excluded.
- ^b The percentages from 1985-1988 represent the numbers of Ph.D.s with handicaps. Beginning in 1989, the response rates include Ph.D.s who reported "no" handicap. Note: The definition of "handicapped" was much more restrictive in 1990 and 1991.
- ^c Because this field is not applicable to all doctorate recipients, the response rate will always be under 100%.
- ^d Because this field is not applicable to all doctorate recipients, the response rate will always be under 100%. Note: "No Baccalaureate/Master's" represents only "no baccalaureate" from 1983 to 1992. Beginning in 1993, it indicates that the Ph.D. held no baccalaureate and/or master's degree.

^a Because this field is not applicable to all doctorate recipients, the response rate will always be under 100%.

^b The percentage was low in 1992 because 28% of the Ph.D.s completed earlier survey forms that did not request field of dissertation.

^c As of FY 1996, the percentage included recipients who said they had no primary source of support.

III. Derived Variables

The following derived variables deserve further explanation.

Postdoctoral Plans to Stay in the United States

Starting in 1997, the planned postdoctoral location of doctorate recipients was coded in a new variable called PDLOC using FIPS codes for U.S. states and territories and countries. Values of PDLOC less than 100 indicate a postdoctoral location in the United States.

Also beginning in 1997, a dichotomous variable, PDUSFOR, was created to index whether the planned postdoctoral location reported by the respondent was in the United States or in a foreign location.

For years prior to 1997, this variable is based on PDAFFIL. The first character of PDAFFIL flags whether the respondent's planned postdoctoral location is in the United States; a numeric character in this position indicates a United States location. Non-numeric values in the first position of PDAFFIL (except "R") indicate non-U.S. locations. A value of "R" for PDAFFIL signifies the respondent's refusal to provide information.

For the interested user, the following SAS code produces "USPLAN" as an index of plans to stay in the United States following the doctorate using PDAFFIL1 (a variable created using the first character of PDAFFIL).

```
USPLAN=2; /* Outside the U.S. */  
if PDAFFIL1 in ("0","1","2","3","4","5","6","7","8","9")  
    then USPLAN=1; /* U.S. */  
if PDAFFIL1 eq "R" then USPLAN=.;  
if PDAFFIL1 eq " " then USPLAN=.;
```

Firm Postdoctoral Plans

Postdoctoral plans are coded using the values of PDOCSTAT, which indicate that the doctorate recipient's postdoctoral plans were definite at the time the survey was completed. That is, codes 0, 1, or A on PDOCSTAT indicate that the respondent had definite postdoctoral plans,

whereas codes 2, 3, and 4 indicate that the respondent was still seeking to determine postdoctoral placement.

The following is the SAS code used to derive FIRMPLAN from PDOCSTAT :

```
if PDOCSTAT in ("0","1","A") then FIRMPLAN=1; /* Definite */  
if PDOCSTAT in ("2","3","4") FIRMPLAN=2; /* Seeking */  
if PDOCSTAT eq " " then FIRMPLAN=.;
```

Firm Plans to Stay in the United States

This variable is derived from USPLAN and FIRMPLAN. A respondent is coded as having firm plans to stay in the United States if the reported postdoctoral location was in the United States and the reported postdoctoral plans were coded “definite.”

The following is the SAS code that creates the variable FIRMUS from USPLAN and FIRMPLAN as described above.

```
FIRMUS=2;  
if (USPLAN eq 1 and FIRMPLAN eq 1) then FIRMUS=1;  
if USPLAN eq . or FIRMPLAN eq . then FIRMUS=.;
```

Time to Doctorate

Total time to degree (TTD): TTD measures the total elapsed time between the baccalaureate and the doctorate (including time not enrolled in school). TTD can be computed only for individuals whose baccalaureate year is known. Baccalaureate year is often obtained from commencement programs or doctorate institutions when not reported by the recipient. *Months are now included in the computation (see note below).*

Registered time to degree (RTD): RTD gauges the time in attendance at colleges and universities between receipt of the baccalaureate and the doctorate. Enrollment may include years of attendance not related to a recipient’s doctoral program. RTD can only be computed for individuals who provided all years of college attendance after the baccalaureate. *Months are now included in the computation (see note below).*

Note about medians: The method of computing medians, beginning with *Summary Report 1994*, is as follows. Months (of birth, baccalaureate, and doctorate) are included in the calculations whenever available; if months are missing, only years are used in the calculations. (However, medians are not computed for years prior to 1969 because doctorate month is unavailable for all doctorate recipients.) Medians presented in previous summary reports were based only on years. Some medians would be the same regardless of the method of computation, but the new method generally computes slightly different results. While differences are small (usually one- or two-tenths of a year), readers should consider these differences when comparing medians presented in the report with those in earlier reports.

IV. Changes to the 1999 SED

Citizenship

In 1999, a new category was added to the variable CITIZ to identify non-U.S. citizens for whom visa status was unknown. The new code frame for the data is as follows

Code	Citizenship Category
0	U.S. Native
1	U.S. Naturalized Citizen
2	Non-U.S. Immigrant (Permanent Resident)
3	Non-U.S. Non-immigrant (Temporary Resident)
4	Non-U.S., Visa Status Unknown
Blank	Missing/Citizenship Unknown

In 1999, a logical assignment to code 4 was made if all follow-up attempts for missing citizenship were unsuccessful. The assignment was made for 1997, 1998, and 1999 records if three out of four variables – BIRTHPL, HSPLACE, EDPLACE, PDUSFOR – were non-U.S. locations. For the purposes of the tabulations in this report, code 4 was combined with code 3. This is consistent with what was done in previous rounds and seems well justified by an examination of the data. However, the existence of this new code will allow the data user to exclude the cases for which visa status is unknown if desired. One should keep in mind that the number of cases in this group (code 4) is not sufficient to warrant analysis as a separate group (n=342).

To match the numbers in this report, use the following code before analyzing citizenship:

```
/*RECODE CITIZ 4 */  
IF (CITIZ eq '4') THEN CITIZ='3';
```

Birthplace, Country of Citizenship, and Postdoctoral Location

This is the first data cycle conducted after the unification of Hong Kong and the People's Republic of China. However, because previous rounds report values for Birthplace, Country of Citizenship, and Postdoctoral Location separately for these two locations, and because a number of respondents still reported their country of citizenship as Hong Kong, it was decided to continue to analyze these data separately. As a result, for the time being, in the tabulations of the variables using country locations in this report, figures reported for China do not include Hong Kong.

Survey of Earned Doctorates

July 1, 1998 to June 30, 1999

Conducted by

The National Opinion Research Center at the University of Chicago
for

The National Science Foundation

The National Institutes of Health

The National Endowment for the Humanities

The U.S. Department of Education

The U.S. Department of Agriculture

This information is solicited under the Freedom of Information Act (5 U.S.C. 552). The information you provide will be used for research purposes by your doctoral institution for statistical purposes only.

carefully written doctoral dissertation. The information is not to be used for any other purpose. If you wish to amend, provide it is also voluntary. Please do not include any information that might personally identify you. Your response is confidential and the information will not be used for any other purpose.

The time needed to complete this form varies, but is estimated to be 20 minutes. If you need further information, contact the National Science Foundation, 4201 Wilson Blvd., Arlington, VA 22204.

OMB No. 3940-0016
Approval Expires 5/2000

NATIONAL SCIENCE FOUNDATION
4201 WILSON BOULEVARD
ARLINGTON, VIRGINIA 22230

To the Doctorate Recipient:

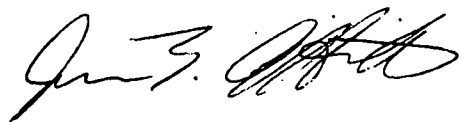

Congratulations on earning a doctoral degree! This is an important accomplishment for you. Your accomplishment is also significant for both this nation and others, as the new knowledge generated by research doctorates enhances the quality of life in this country and throughout the world. Because of the importance of persons earning research doctorates, several Federal agencies—listed on the cover—sponsor this Survey of Earned Doctorates.

The basic purpose of this survey is to gather objective data about doctoral graduates. These data are important in improving graduate education both at your home institution and beyond. Often, decisions made by governmental and private agencies to develop new programs, or to support present ones, are based in part on the data developed from this survey.

This form is distributed by the Graduate Deans and is filled out by all persons who have completed the requirements for a research doctoral degree. Please print your name on the cover if you have not already done so, and then complete this questionnaire and return it to the Graduate Dean. The confidentiality of the information you provide is carefully protected.

On behalf of the sponsoring Federal agencies, I thank you for your participation in this survey.

Best wishes,

Jeanne E. Griffith
Director, Division of Science Resources Studies

INSTRUCTIONS

Thank you for taking the time to complete this important questionnaire. Directions are provided for each question. Because not all questions will apply to everyone, you may be asked to skip certain questions.

- If you have not already done so, please print your name on the front cover.
- You may use either a pen or pencil.
- When answering questions that require marking a box, please use an "X."
- If you need to change an answer, please make sure that your old answer is either completely erased or clearly crossed out.
- On pages 8 and 9 (inside the back cover) is a Specialties List for classifying your field(s) of specialization in Questions A2, A10, B5, and B9.

Thanks again for your help; we really appreciate it.

PART A - Education

A1. What is the title of your dissertation?

Please mark (X) this box if the title below refers to a performance, project report or a musical or literary composition required instead of a dissertation

Title _____

A2. Using the Specialties List (pages 8-9), please write the name and number of the field of your dissertation research.

Name of field _____
 Number of field _____

A3. After receiving your first bachelor's degree (or equivalent), and including the period spent on your dissertation, how many years were you a full-time student?

_____ Years (whole numbers)

A4. Please check the category that most fully describes your employment or study status during the year immediately before the award of the doctorate.

Mark (X) one

- | | | |
|----------------------------|--------------------------|---------------------------|

| 3 <input type="checkbox"/> | Part-time employed | |
| 4 <input type="checkbox"/> | Not employed | |
| | Other - <i>Specify</i> ↓ | |
- _____

A5. (IF FULL-TIME EMPLOYED) What type of position did you hold?

Mark (X) one

- 6 ☐ College or university, faculty
 7 ☐ College or university, non-faculty
 8 ☐ Elementary or secondary school, teaching
 9 ☐ Elementary or secondary school, non-teaching
 10 ☐ Industry or business
 12 ☐ Other - *Specify* ↓
- _____

A6. In what state or country was the high school/secondary school that you last attended?

State (if U.S.) _____

OR

Country (if not U.S.) _____

A7. When did you graduate from high school/secondary school?

Month _____ Year _____
 _____ **19** _____

A8. Please name the department (or interdisciplinary committee, center, institute, etc.) of the university that supervised your doctoral program.

☐ *Mark (X) box if none*

_____ Department/Committee/Center/Institute/Program

A9. Please name the school or college within the university that supervised your doctoral program.

Mark (X) box if not applicable

_____ School or College within University

A10. Please list below, chronologically, all colleges (including 2-year) and graduate institutions you have attended and each degree earned (if any). Be sure to give the years attended for ALL institutions attended. Include your doctoral institution(s) and degree at the end.

☐ Mark (X) box if bachelor's degree (or equivalent) was never received.

☐ Mark (X) box if master's degree (or equivalent) was never received.

City

State
(if U.S.)

Country
(if not U.S.)

**SKIP
to
B4**

B3. In what state or country do you intend to live after graduation?

Mark (X) one

☐ in U.S. → State _____

☐ not in U.S. → Country _____

B4. What best describes your immediate postgraduate plans?

Mark (X) one

☐ Postdoctoral fellowship

☐ Postdoctoral research associateship

☐ Traineeship

☐ Other study - Specify ↓

4 ☐ Employment (other than 0,1,2,3)

5 ☐ Military service

6 ☐ Other - Specify ↓

**SKIP
to
B7**

B5. Please use the Specialties List (pages 8-9) to enter the name and number of your postdoctoral field.

Name of field

Number of field

B6. What will be the main source of financial support for your postdoctoral study/research?

Mark (X) one

☐ U.S. Government

☐ College or university

☐ Private foundation

☐ Nonprofit, other than private foundation

☐ Other - Specify ↓

6 ☐ Unknown

**SKIP
to
C1,
page 6**

B7. For what type of employer will you be working?

Mark (X) one

EDUCATION

- ☐ U.S. 4-year college or university other than medical school
- ☐ U.S. medical school
- ☐ U.S. junior or community college
- ☐ Elementary or secondary school
- ☐ Foreign institution

GOVERNMENT

- ☐ Foreign government
- ☐ U.S. federal government
- ☐ U.S. state government
- ☐ U.S. local government

PRIVATE SECTOR

- ☐ Nonprofit organization
- ☐ Industry or business
- ☐ Self-employed

OTHER

- ☐ Other - Specify ↓
- _____

B8. From the list below, please indicate what your primary and secondary work activities will be by entering the numbers of your selections in the appropriate boxes:

Enter numbers from below:

- a. _____ Primary Activity
- b. _____ Secondary Activity

- 0 Research and development
- 1 Teaching
- 2 Administration
- 3 Professional services to individuals
- 5 Other - Specify ↓
- _____

B9. Please use the Specialties List (pages 8-9) to enter the name and number of the field in which you will be working.

Name of field

Number of field

PART C - Background Information

C1. Are you -

- 1 ☐ Male
2 ☐ Female

C2. What is your marital status?

Mark (X) one

- 1 ☐ Married
2 ☐ Living in a marriage - like relationship
3 ☐ Widowed
4 ☐ Separated/divorced
5 ☐ Never married

C3. Not including yourself, how many dependents do you have - that is, how many others receive at least one half of their support from you?

_____ Number

C4. What is the highest educational attainment of your mother and father?

Mark (X) one for each parent

	a. Mother ↓	b. Father ↓
Less than high school/ secondary school	1 <input type="checkbox"/>	1 <input type="checkbox"/>
High-school/secondary- school graduate	2 <input type="checkbox"/>	2 <input type="checkbox"/>
Some college	3 <input type="checkbox"/>	3 <input type="checkbox"/>
Bachelor's degree	4 <input type="checkbox"/>	4 <input type="checkbox"/>
Master's degree	5 <input type="checkbox"/>	5 <input type="checkbox"/>
Professional degree	6 <input type="checkbox"/>	6 <input type="checkbox"/>
Doctoral degree	7 <input type="checkbox"/>	7 <input type="checkbox"/>

C5. What is your place of birth?

State (if U.S.)

OR
Country (if not U.S.)

C6. What is your date of birth?

Month _____ Day _____ Year **19** _____

C7. What is your citizenship status?

Mark (X) one

U.S. Citizen:

- 0 ☐ Native Born _____ → **SKIP to C9**
1 ☐ Naturalized _____

Non-U.S. Citizen:

- 2 ☐ With a Permanent U.S. Resident Visa
3 ☐ With a Temporary U.S. Resident Visa

C8. (IF A NON-U.S. CITIZEN) Of which country are you a citizen?

(Specify country of present citizenship)

C9. Are you a person with a disability?

- 1 ☐ Yes
2 ☐ No → **SKIP to C11**

C10. (IF YES) Which of the following categories describes your disability?

- 1 Visual
2 Orthopedic (mobility)
3 Auditory (hearing)
4 Vocal
5 Other - Specify ↓

C11. Are you Hispanic?

- 0 Yes → **GO to C12, page 7**
1 No → **SKIP to C13, page 7**

C12. (IF YES TO C11) Which of the following describes your Hispanic origin or descent?

- 0 ☐ Mexican American
1 ☐ Puerto Rican
2 ☐ Other Hispanic - *Specify* ☐

C13. What is your racial background?

Mark (X) one

- 0 ☐ American Indian or Alaskan Native
1 ☐ Asian or Pacific Islander
2 ☐ Black
3 ☐ White

C14. Please fill in your U.S. Social Security Number.

____ - ____ - ____

C15. In case we need to clarify some of the information you have provided, please list a telephone number and e-mail address (if available) where you can be reached.

Daytime telephone _____

Evening telephone _____

E-mail address _____

C16. Because we are interested in how education relates to employment over time, we may be recontacting you. To help us, please provide the name, address, and telephone number of one person who is likely to know where you can be reached. As with all information provided in this questionnaire, complete confidentiality will be provided.

Care of (if applicable)

Number and Street

City/Town

State or Province

Zip Code or Postal Code

Country (if outside U.S.)

Phone Number (including area or country code)

C17. Please sign and date.

Signature

Date

Mark (X) box if you would like a summary of the results of this survey (available as funding permits).

Results of the Survey of Earned Doctorates can be found on the National Science Foundation's World Wide Web page at <http://www.nsf.gov/sbe/srs/stats.htm>

Please use the back cover to make any additional comments you may have about this survey.

Thank you for completing the questionnaire. Please return it to the GRADUATE DEAN for forwarding to Survey of Earned Doctorates, National Opinion Research Center at the University of Chicago, 1525 East 55th Street, Chicago, IL 60615. Should you need to call us, our toll free number is 1-800-248-8649.

SPECIALTIES LIST

INSTRUCTIONS: The following field listing is to be used in responding to items A2, A10, B5, and B9. If you choose a field marked with an asterisk (*), please write in your field of specialization in the space provided in those items.

AGRICULTURAL SCIENCES

- 000 Agricultural Economics
- 002 Agricultural Business & Mgmt.
- 005 Animal Breeding & Genetics
- 010 Animal Nutrition
- 012 Dairy Science
- 014 Poultry Science
- 055 Fisheries Sci. & Management
- 019 Animal Sciences, Other*
- 020 Agronomy & Crop Science
- 025 Plant Breeding & Genetics
- 030 Plant Pathology (See also 120)
- 039 Plant Sciences, Other*
- 043 Food Engineering
- 044 Food Sciences, Other*
- 046 Soil Chemistry/Microbiology
- 049 Soil Sciences, Other*
- 050 Horticulture Science
- 066 Forest Biology
- 068 Forest Engineering
- 070 Forest Management
- 072 Wood Sci. & Pulp/Paper Tech.
- 074 Conserv./Renewable Natural Res.
- 079 Forestry & Related Sci., Other*
- 080 Wildlife/Range Management
- 098 Agricultural Sci., General
- 099 Agricultural Sci., Other*

BIOLOGICAL SCIENCES

- 100 Biochemistry
- 103 Biomedical Sciences
- 105 Biophysics
- 107 Biotechnology Research
- 110 Bacteriology
- 115 Plant Genetics
- 120 Plant Pathology (See also 030)
- 125 Plant Physiology
- 129 Botany, Other*
- 130 Anatomy
- 133 Biometrics & Biostatistics
- 136 Cell Biology (See also 154)
- 139 Ecology
- 142 Developmental Bio./Embryology
- 145 Endocrinology
- 148 Entomology
- 151 Biological Immunology
- 154 Molecular Biology
- 157 Microbiology
- 160 Neuroscience
- 163 Nutritional Sciences
- 166 Parasitology
- 169 Toxicology
- 170 Genetics, Human & Animal
- 175 Pathology, Human & Animal (See also 120)
- 180 Pharmacology, Human & Animal
- 185 Physiology, Human & Animal

- 189 Zoology, Other*
- 198 Biological Sciences, General
- 199 Biological Sciences, Other*

HEALTH SCIENCES

- 200 Speech-Lang. Pathology & Audiology
- 210 Environmental Health
- 212 Health Systems/Service Admin.
- 215 Public Health
- 220 Epidemiology (See also 133)
- 222 Exercise Physiology/ Sci., Kinesiology
- 230 Nursing
- 240 Pharmacy
- 245 Rehabilitation/Therapeutic Services
- 250 Veterinary Medicine
- 298 Health Sciences, General
- 299 Health Sciences, Other*

ENGINEERING

- 300 Aerospace, Aeronaut. & Astronaut.
- 303 Agricultural
- 306 Bioengineering & Biomedical
- 309 Ceramic Sciences
- 312 Chemical
- 315 Civil
- 318 Communications
- 321 Computer
- 324 Electrical & Electronics
- 327 Engineering Mechanics
- 330 Engineering Physics
- 333 Engineering Science
- 336 Environmental Health Engineering
- 339 Industrial & Manufacturing
- 342 Materials Science
- 345 Mechanical
- 348 Metallurgical
- 351 Mining & Mineral
- 357 Nuclear
- 360 Ocean
- 363 Operations Research (See also 465, 930)
- 366 Petroleum
- 369 Polymer & Plastics
- 372 Systems
- 398 Engineering, General
- 399 Engineering, Other*

COMPUTER AND INFORMATION SCIENCES

- 400 Computer Science
- 410 Information Science & Systems*

MATHEMATICS

- 420 Applied Mathematics
- 425 Algebra
- 430 Analysis & Functional Analysis

- 435 Geometry
- 440 Logic (See also 785)
- 445 Number Theory
- 450 Mathematical Statistics
- 455 Topology
- 460 Computing Theory & Practice
- 465 Operations Research (See also 363, 930)
- 498 Mathematics, General
- 499 Mathematics, Other*

PHYSICAL SCIENCES

Astronomy

- 500 Astronomy
- 505 Astrophysics

Atmospheric Sci. and Meteorology

- 510 Atmospheric Physics & Chemistry
- 512 Atmospheric Dynamics
- 514 Meteorology
- 518 Atmos. Sci./Meteorol., General
- 519 Atmos. Sci./Meteorol., Other*

Chemistry

- 520 Analytical
- 522 Inorganic
- 524 Nuclear
- 526 Organic
- 528 Medicinal/Pharmaceutical
- 530 Physical
- 532 Polymer
- 534 Theoretical
- 538 Chemistry, General
- 539 Chemistry, Other* (See 100 Biochemistry)

Geological & Related Sciences

- 540 Geology
- 542 Geochemistry
- 544 Geophysics & Seismology
- 546 Paleontology
- 548 Mineralogy & Petrology
- 550 Stratigraphy & Sedimentation
- 552 Geomorphology & Glacial Geology
- 558 Geolog. & Related Sci., General
- 559 Geolog. & Related Sci., Other*

Physics

- 560 Acoustics
- 561 Chemical & Atomic/Molecular
- 564 Elementary Particle
- 566 Fluids
- 568 Nuclear
- 569 Optics
- 570 Plasma & High-Temperature
- 572 Polymer

SPECIALTIES LIST (continued)

- 574 Solid State & Low-Temperature
- 578 Physics, General
- 579 Physics, Other*

Miscellaneous Physical Sciences

- 580 Environmental Science
- 585 Hydrology & Water Resources
- 590 Oceanography
- 595 Marine Sciences
- 599 Misc. Physical Sciences, Other*

PSYCHOLOGY

- 600 Clinical
- 603 Cognitive & Psycholinguistics
- 606 Comparative
- 609 Counseling
- 612 Developmental & Child
- 613 Human/Indiv. & Family Devlpmt.
- 615 Experimental
- 618 Educational (See also 822)
- 620 Family & Marriage Counseling
- 621 Indust. & Organiz. (See also 935)
- 624 Personality
- 627 Physiological/Psychobiology
- 630 Psychometrics
- 633 Quantitative
- 636 School (See also 825)
- 639 Social
- 648 Psychology, General
- 649 Psychology, Other*

SOCIAL SCIENCES

- 650 Anthropology
- 652 Area Studies
- 658 Criminology
- 662 Demography/Population Studies
- 666 Economics
- 668 Econometrics
- 670 Geography
- 674 International Relations/Affairs
- 678 Political Sci. & Government
- 682 Public Policy Analysis
- 686 Sociology
- 690 Statistics (See also 450)
- 694 Urban Affairs/Studies
- 698 Social Sciences, General
- 699 Social Sciences, Other*

HUMANITIES

History

- 700 History, American
- 703 History, Asian
- 705 History, European
- 710 History/Philosophy of Sci. & Tech.
- 718 History, General
- 719 History, Other*

- Letters**
- 720 Classics
- 723 Comparative Literature
- 729 Linguistics
- 732 Literature, American
- 733 Literature, English
- 734 English Language
- 736 Speech & Rhetorical Studies
- 738 Letters, General
- 739 Letters, Other*

Foreign Languages and Literature

- 740 French
- 743 German
- 746 Italian
- 749 Spanish
- 752 Russian
- 755 Slavic (other than Russian)
- 758 Chinese
- 762 Japanese
- 765 Hebrew
- 768 Arabic
- 769 Other Languages & Literature*

Other Humanities

- 770 American Studies
- 773 Archeology
- 776 Art History/Criticism/Conserv.
- 780 Music
- 785 Philosophy (See also 440)
- 790 Religion (See also 984)
- 795 Drama/Theater Arts
- 798 Humanities, General
- 799 Humanities, Other*

EDUCATION

- 800 Curriculum & Instruction
- 805 Educational Admin. & Supervision
- 807 Educational Leadership
- 810 Educ./Instruct. Media Design
- 815 Educ. Stat./Research Methods
- 820 Educ. Assess./Test./Meas.
- 822 Educ. Psychology (See also 618)
- 825 School Psychology (See also 636)
- 830 Social/Phil. Found. of Education
- 835 Special Education
- 840 Couns. Educ./Couns. & Guid. Serv.
- 845 Higher Education/Eval. & Research

Teacher Education

- 850 Pre-elementary/Early Childhood
- 852 Elementary
- 856 Secondary
- 858 Adult & Continuing

Teaching Fields

- 860 Agricultural Education
- 861 Art Education
- 862 Business Education

- 864 English Education
- 866 Foreign Languages Education
- 868 Health Education
- 870 Home Economics Education
- 872 Tech. & Indust. Arts Education
- 874 Mathematics Education
- 876 Music Education
- 878 Nursing Education
- 880 Physical Education & Coaching
- 882 Reading Education
- 884 Science Education
- 885 Social Science Education
- 887 Technical Education
- 888 Trade & Industrial Education
- 889 Teacher Educ., Specific Acad. & Voc. Prog., Other*

Other Education

- 898 Education, General
- 899 Education, Other*

PROFESSIONAL FIELDS

Business Management and Administrative Services

- 900 Accounting
- 905 Banking/Financial Support Serv.
- 910 Business Admin. & Management
- 915 Business/Managerial Economics
- 916 International Business
- 917 Mgmt. Info. Sys./Bus. Data Proc.
- 920 Marketing Management & Research
- 930 Operations Research
(See also 363, 465)
- 935 Organiz. Behavior (See also 621)
- 938 Bus. Mgmt./Admin. Serv., Gen.
- 939 Bus. Mgmt./Admin. Serv., Other*

Communications

- 940 Communications Research
- 947 Mass Communications
- 957 Communication Theory
- 958 Communications, General
- 959 Communications, Other*
(See also 736)

Other Professional Fields

- 960 Architec. Environ. Design
- 964 Home Economics
- 968 Law
- 972 Library Science
- 974 Parks/Rec./Leisure/Fitness
- 976 Public Administration
- 980 Social Work
- 984 Theol./Religious Education
(See also 790)
- 988 Professional Fields, General
- 989 Professional Fields, Other*

OTHER FIELDS*

- 999 Other

Comments About This Survey

**Please return this questionnaire to your GRADUATE DEAN for forwarding to
Survey of Earned Doctorates, National Opinion Research Center at the University of Chicago,
1525 East 55th Street, Chicago, IL 60615.**

APPENDIX E

Field Classification and Research Degree Titles

APPENDIX E: Field Classification and Research Degree Titles

The appendix tables present data according to the following field classifications. Appendix Tables A -1 and A-2 and Appendix Table B -1 display all subfields that are on the survey Specialties List. Appendix Tables A -4, A-5, and A-6 show data by seven broad fields only. Appendix Tables A -3 and A -7 include the additional field groupings indicated below.

SCIENCES

Physical Sciences (400-599)

Physics and Astronomy (500-505, 560-579)
Chemistry (520-539)
Earth, Atmospheric, and Marine Sciences
(510-519, 540-559, 590-599)
Mathematics (420-499)
Computer Sciences (400-410) Combined in Table A -7

Engineering (300-399)

Life Sciences (000-299)

Biological Sciences (100-199)
Biochemistry (100)
Other Biological Sciences (103-199)
Health Sciences (200-299)
Agricultural Sciences (000-099)

Social Sciences (600-699)

Psychology (600-649)
Economics and Econometrics (666, 668)
Anthropology and Sociology (650, 686)
Political Science and International Relations
(674, 678) Combined in Table A -7
Other Social Sciences
(652-662, 670, 672, 682, 690-699)

NONSCIENCES

Humanities (700-799)

History (700-719)
English and American Language
and Literature (732-734)
Foreign Languages and Literature
(740-769)
Other Humanities
(720-729, 736-739, 770-799) Combined in Table A -7

Education (800-899)

Professional and Other Fields (900-999)

Business and Management (900-939)
Other Professional Fields (940-989)
Other Fields (999)

NOTE: Doctorate recipients indicate their fields of specialty.
Their choices may differ from departmental names.

TITLES OF RESEARCH DEGREES INCLUDED IN THE SURVEY OF EARNED DOCTORATES

DA/DAT	Doctor of Arts/Arts in Teaching	DMM	Doctor of Music Ministry
DArch	Doctor of Architecture	DMSc	Doctor of Medical Science
DAS	Doctor of Applied Science	DNSc	Doctor of Nursing Science
DBA	Doctor of Business Administration	DPA	Doctor of Public Administration
DChem	Doctor of Chemistry	DPE	Doctor of Physical Education
DCJ	Doctor of Criminal Justice	DPH	Doctor of Public Health
DCL	Doctor of Comparative Law/Civil Law	DPS	Doctor of Professional Studies
DCrim	Doctor of Criminology	DrDES	Doctor of Design
DED	Doctor of Environmental Design	DRec/DR	Doctor of Recreation
DEng	Doctor of Engineering	DSc/ScD	Doctor of Science
DEnv	Doctor of Environment	DScD	Doctor of Science in Dentistry
DESc/ScDE	Doctor of Engineering Science	DSch	Doctor of Science and Hygiene
DF	Doctor of Forestry	DSVM	Doctor of Science in Veterinary Medicine
DFA	Doctor of Fine Arts	DSM	Doctor of Sacred Music
DGS	Doctor of Geological Science	DSSc	Doctor of Social Science
DHL	Doctor of Hebrew Literature/Letters	DSW	Doctor of Social Work
DHS	Doctor of Health and Safety	Edd	Doctor of Education
DHS	Doctor of Hebrew Studies	JCD	Doctor of Canon Law
DIT	Doctor of Industrial Technology	JSD	Doctor of Juristic Science
DLS	Doctor of Library Science	LScD	Doctor of Science of Law
DM	Doctor of Music	PhD	Doctor of Philosophy
DMA	Doctor of Musical Arts	RhD	Doctor of Rehabilitation
DME	Doctor of Musical Education	SJD	Doctor of Juridical Science
DML	Doctor of Modern Languages	ThD	Doctor of Theology

NSF Publications from the Doctorate Data Project

DATA BRIEFS	ISSUE BRIEFS	REPORTS
Healthy Economy Yields Even Lower Unemployment Rate for Doctoral Scientists and Engineers	Ph.D. Unemployment Trends: Cause for Alarm?	Science and Engineering Doctorate Awards: 1999
Doctorate Awards Declining in Some Science and Engineering Fields	What's Happening in the Labor Market for Recent Science and Engineering Ph.D. Recipients?	Science and Engineering Doctorates: 1960-91
Despite Increases, Women and Minorities Still Underrepresented in Undergraduate Science and Engineering Education	Is the Gender Gap in Unemployment Disappearing?	Characteristics of Doctoral Scientists and Engineers in the U.S.: 1997
Doctoral Awards Increase in S&E Overall, But Computer Science Declines for First Time	What is Happening to Academic Employment of Scientists and Engineers?	Trend Tables on Doctoral Scientists and Engineers in the U.S.: 1993-97 (Web only)
Employment of Scientists and – Engineers Reaches 3.2 Million in 1995	International Mobility of Scientists and Engineers to the United States – Brain Drain or Brain Circulation	Who is Unemployed? Factors Affecting Unemployment Among Individuals with Doctoral Degrees in Science and Engineering
Number of Doctoral Scientists and Engineers Grows by 6% Between 1993 & 1995	What is the Debt Burden of New Science and Engineering Ph.D.'s?	Science and Engineering State Profiles: 1998
<p>Data sources and publications sources:</p> <p><i>These publications contain data from</i></p> <p><i>1) the annual Survey of Earned Doctorates(a universe survey on the education of research doctorates) or</i></p> <p><i>2) the biennial Survey of Doctorate Recipients (a longitudinal sample survey of workforce characteristics).</i></p> <p><i>Complete electronic information on these surveys and publications may be obtained on the web at:</i> www.nsf.gov/sbe/stats.htm.</p> <p><i>Written reports may be ordered online (www.nsf.gov/home/orderpub.htm) or by calling 301-947-2722.</i></p> <p><i>For further information please contact Susan T. Hill, Director, Doctorate Data Project, sthill@nsf.gov.</i></p>	Are Forms of Financial Support and Employment Choices of Recent Science and Engineering Ph.D.'s Related?	Doctoral Scientists and Engineers in the U.S.: 1997 Profile Tables
	Does the Educational Debt Burden of Science and Engineering Doctorates Differ by Race/Ethnicity and Sex?	Modes of Financial Support in the Graduate Education of S&E Doctorate Recipients
	Degrees and Occupations in Engineering: How Do They Diverge?	Statistical Profiles of Foreign Doctoral Recipients in Science and Engineering: Plans to Stay in the United States
	Has the Use of Postdocs Changed?	Women, Minorities, and Persons with Disabilities in Science and Engineering: 2000
	How Much Does the U.S. Rely on Immigrant Engineers?	Science and Engineering Degrees: 1966-97
	What Follows Postdoctorate Experience? Employment Patterns of 1993 Postdocs in 1995	Science and Engineering Degrees, by Race/Ethnicity of Recipients: 1989-97
	How Large is the Gap in Salaries of Male and Female Engineers?	SESTAT: A Tool for Studying Scientists and Engineers in the United States
